FOREWORD

The great moral responsibility for full accounting was realized by the Commission for Relief in Belgium from its first day. The precaution was taken to engage one of the leading international firms to audit every ramification of expenditure and receipt; to make doubly sure, this firm was engaged to undertake the unusual task of itself keeping the books and furnishing its own accounting staff at all principal offices of the Commission. Full financial statements and accountings were presented from month to month to the public and final statements in September, 1921, representing the summation of the work during the six years from September, 1914, to September, 1920.

This present volume is mainly concerned with commodity statistics as distinguished from financial accounting. This is not a history of the Commission—which is yet to be written—but a sufficient outline of the operations of the C.R.B. is presented to enable the reader to comprehend its organization and achievements. Begun as a purely philanthropic enterprise, the Commission soon sought and received financial support from the Belgian, British, French, and, later, the American governments. The C.R.B., while always remaining on a temporary basis, without incorporation or well defined legal status, came to have many attributes of a government in itself, possessing an agreed immunity from the restrictions placed by belligerent powers during the war, flying its own flag, issuing its own passports, operating a large fleet of ocean vessels, owning and operating a great number of canal boats, extending its offices into many countries, requisitioning native food supplies, rationing entire populations, making full provision for the destitute through complex and decentralized benevolent organizations, operating mills, factories, and transportation, and, in fact, maintaining the whole economic cycle of a nation.

Never was there greater pressure for economy and efficiency upon an organization. The principal officers of the Commission gave their services without salary. Shipping firms, accountants, insurance agencies, buying agencies throughout the world gave their services without charge otherwise than the mere out-of-pocket incidentals. The distributing committee of over 55,000 members gave their voluntary services over these many years. Forty thousand Belgian and French women dedicated themselves to the saving of the child life of their nations. At no time was the population fed to more than the point of bare subsistence. Every penny saved meant larger food supplies and less suffering. At no time were the finances of the Commission certain for more than a few months, and at different periods its liabilities were in excess of its actual or prospective assets, and the continuous food supply was only maintained through the personal guarantees of the directors and their friends. The total administrative expenditure was held down to less than one-half of one per cent (exactly $\frac{43}{100}$ of 1%) of the entire operation. The economy of operation in the organization has, in fact, even a higher standard of test than this, in that the average prices maintained for staple food supplies in this occupied territory during the entire period of war will show from 15 to 20 per cent less than the prices in the allied countries at the same periods.

Overlaid on the whole structure were a series of checks and balances to determine the truth as to destitution and maintain the morale and efficiency of the admin-

FOREWORD

istration and honesty in accounting. It was, in fact, due to the continuous and careful work of statisticians and accountants that the Commission maintained its very existence, for through their tables and figures the C.R.B. was able to show that the supplies, imported into Belgium and Northern France under its control, actually reached only the civilian populations and were not used by the occupying military authorities. Thus the requirements of the Allied Forces were met and public confidence in the C.R.B. was maintained.

Certain balances remained after the Armistice period in the hands of the Commission after due provision had been made for the destitute, and, at the request of the interested Belgian and French governments, these final residues of funds were applied, through the formation of charitable corporations, to educational and charitable work to be maintained as enduring memorials to that American good will that offered to help in time of need through the Commission for Relief in Belgium. In this manner the final liquidation of the Commission has been completed.

No set of accounts or figures can reflect the intense anxiety, the patience and skill required of the workers who toiled in this complex agency, defending ten million lives. Inspired with humane sympathy for these people, who had no responsibility for the war yet suffered most from its hardships and barbarities, they labored that this service might be done efficiently and with economy. The multitude had but little concern for the bookkeepers in the back rooms of the offices of the relief organization. But the work of these men was of the utmost importance to those in official direction, not only that the relief undertaking might be effectively performed and presented to the world, but that our honor and the honor of our country in this trusteeship should never be challenged.

HERBERT HOOVER,
Chairman.

PART I

Review of Relief Operations

I. RELIEF ORGANIZATION

The tragic incidents associated with the invasion and occupation of Belgium are well known. The German armies crossed the Belgian frontier in the early hours of the morning of August 4, 1914, and three days later they captured two of the forts of Liège and entered Liège itself. Despite the heroic efforts of the Belgian army the advance continued; the German armies swept across the Meuse, overran central Belgium, and marched into Brussels on August 21. Then came the great drive through western Belgium into the heart of France, only to be checked at the battle of the Marne. Between the first week in September and the middle of October the Germans, after a series of engagements, took up that line of entrenchments extending from the Swiss border through northeastern France and the Ypres section of Belgium to the North Sea, which continued for the next four years, with slight variations, to be the battle line on the western front.

The German attempt to destroy the military force of the western allies and to occupy the Channel ports in the first months of the war had failed. They had succeeded, however, in occupying all of Belgium except the extreme northwest corner, as well as a large strip of French territory. These areas, in which there lived over seven million Belgians and about two million French, remained under German rule for four years.

In the first few weeks of the war every interference of any kind with the plans and operations of the German forces was sternly punished. Great destruction, including the burning of towns and villages, accompanied the invasion, not all as the result of military operations but in part as reprisals by the Germans for what they considered to be opposition on the part of the population. Material, food supplies, and crops were confiscated or requisitioned by the military; huge indemnities were imposed on cities and communities. Hundreds of thousands of people left their homes and fled before the invading armies, crowding the roads leading out of Belgium in every direction. Many actually escaped to France, Holland, and England, where they remained throughout the war. The majority were overtaken and in destitute conditions crowded the larger towns and cities.

Once the period of advance was over, however, and the Germans had established themselves securely in Belgium, the period of military excesses came to an end and a German governor-general was appointed, under whose direction a complete administrative system was set up over the whole of the occupied territories.

EARLY RELIEF MEASURES

In the first months of the war the Belgian communities had three great problems thrust upon them: (a) the lack of foodstuffs, due to confiscation and requisition of stocks and to the complete stoppage of imports; (b) the cessation of industry, throwing most of the laboring class out of employment, with no immediate prospect of any resumption of industrial life such as would permit them to earn their livelihood; and (c) the flood of destitute refugees. The danger of food shortage was perceived even before actual occupation, as on August 4 the Belgian Parliament passed a law providing for the requisition by the Government of stocks of grain and potatoes to permit the rationing of the people. King Albert, by an edict of August 14, provided for the

application of this law and authorized the provincial and communal authorities to make such requisition. In the chaos incident to the invasion no general measures of relief were possible, as communication and transportation were completely disrupted and every activity on the part of the people was regarded with suspicion by the occupying military. Nevertheless local volunteer relief committees sprang into being throughout Belgium, principally in the larger cities. Communal authorities coöperated with voluntary charitable efforts in endeavors to ameliorate the immediate and emergency distress among refugees and unemployed. Such stocks of food as existed in warehouses and stores rapidly diminished, and the necessities of life so increased in price as to be beyond the capacity of any but the well-to-do to procure. The cities began at once to purchase from the country districts. The people of Belgium may rely normally upon their own harvest only to the extent of about 22% for bread grains, but to a considerably higher percentage for other food products. The invasion, however, came in the midst of harvesting season. Fields were actually destroyed by the advancing armies, or crops were commandeered for their own use, or, where the field laborers had fled, were left to rot in the fields. The separate local relief committees found themselves competing with one another for the rapidly diminishing food supplies.

Of the local relief agencies in Belgium in the early days, the Central Relief Committee in Brussels was the most important. This committee, with the patronage of the American and Spanish Ministers, was composed of the most influential men in Brussels. Incidentally, among its members and particularly prominent in its operation were several American business men, residents of Belgium. The committee issued appeals for funds, arranged with communes within its jurisdiction to requisition stocks, purchased food from neighboring districts, established soup kitchens, and organized a rationing system. Other committees throughout Belgium proceeded in the same manner, but all these efforts were palliative and designed to meet only the immediate difficulties. Food became scarcer daily and imports from abroad were imperative.

THE COMMISSION FOR RELIEF IN BELGIUM FORMED

Since all these events were taking place within the iron ring of German military control, appeal was made to the neutral ministers who were still in Brussels for advice and support in securing relief. Permission to import a limited amount of food was secured from local German generals and a committee, headed by Millard Shaler, an American engineer, was sent to London with a few thousand dollars to purchase food for Brussels. Upon the arrival of this committee in London, they encountered immediate difficulties due to the blockade measures taken by the Allies against export of food into the area of German occupation. After failure to secure hearing by the blockade officials, Shaler appealed for advice and assistance to Herbert Hoover, an American engineer, who happened to be in London, whither he had gone from California on behalf of the Panama-Pacific Exposition in the summer of 1914. He had remained in London after hostilities commenced, to serve as Chairman of the American Relief Committee, which successfully repatriated thousands of Americans stranded in England in the first chaotic weeks of the war.

Hoover determined that the problem was far greater than the local one of an isolated shipment to the Brussels committee and must be met upon a national scale and by larger diplomatic measures than those being discussed. He at once took the matter up with Walter Hines Page, the American Ambassador in London, and sug-

gested that the American government should use its good offices officially with the Allied governments to open the blockade on one side and secure proper guarantees from requisitioning and interference upon the other. He did not regard the guarantees of the local German generals or the minor piecemeal permissions of Allied blockade officers as any adequate assurance to the 9,000,000 people involved. At the instance of Ambassador Page the American government made the desired representations and secured the assurance requested. The condition imposed was that the entire operation should be carried on and guaranteed by an approved neutral organization diplomatically supported by the American government. This was, however, but a small part of the problem, for in the meanwhile the acute situation had extended over the whole of Belgium and Northern France and the few hundred thousand dollars at the disposal of the committee from Brussels was obviously but a drop in the bucket. While Hoover and his friends had expected to serve but as an intermediary to secure the guarantees, it now became evident that an entirely new and much enlarged situation must be met, involving not alone transportation, blockade, guarantees and distribution, but hundreds of millions of dollars in finance. At this stage, Ambassador Page, backed by the additional representatives who had arrived from Belgium, requested Hoover to undertake the organization and direction of the entire operation.

Although diplomatic authority had been granted, grave doubts were expressed as to whether the physical difficulties could be successfully overcome. Food had to be secured in a limited and disorganized market, vessels had to be chartered to proceed across the mine-strewn North Sea through the naval blockade, and, finally, the relief supplies had to be transhipped in barges and towed through 133 miles of obstructed waterways, passing the German lines, to Brussels. Naval and military authorities, bound to be unsympathetic in the circumstances, foretold certain failure of the unprecedented undertaking. What actually took place in the initial relief movement stands as a record of the energy and persistence of the small group of American organizers. The first organizing meeting of the Commission for Relief in Belgium took place in London, October 22, 1914. Within ten days 2,300 tons of flour, rice, and beans purchased in England had reached Brussels and the first relief bread from the outside world was being distributed to the starving. This first relief cargo, in the S. S. "Coblentz," led a procession of relief vessels, 2,313 in number, carrying in the neighborhood of 100,000 tons each month for nearly five years. The Commission for Relief in Belgium, established as a neutral organization in the midst of war, shortly developed until it was responsible for feeding over 9,000,000 people. With recognized diplomatic rights and obligations and flying its own flag, its unprecedented status was described in amazement by a famous allied diplomat as a "piratical state organized for benevolence."

COMMITTEES CREATED

As a result of these preliminaries, Hoover established two organizations at the outset (the actual date of their organization being October 22, 1914):

1. *The Commission for Relief in Belgium* (C. R. B.), under American direction, under the patronage of the American Ambassadors and Ministers in London, Brussels, The Hague, Paris, and Berlin, the Spanish Ambassador and Minister, respectively, in London and Brussels, and the Dutch Minister at Le Havre;

2. *The Comité National de Secours et d'Alimentation* (Comité National), Belgian, but including in its membership representatives of the American Commission for Re-

lief in Belgium, under the patronage of the Spanish and American Ministers at Brussels, and the Dutch Minister at Le Havre.

In March, 1915, when the relief operation was expanded to include the provisioning of the population of invaded Northern France, about 2,000,000 people, a third committee was set up:

3. *The Comité d'Alimentation du Nord de la France* (Comité Français), a French organization, which also included in its membership representatives of the Commission for Relief in Belgium and of the Comité National de Secours et d'Alimentation.

These three committees in their respective gradual and effective decentralization controlled and administered the entire relief. All function of relief outside of Belgium and Northern France, including the purchase and transportation of foodstuffs and the mobilization of charity, were carried out solely by the C. R. B. The Comité National handled the administration and details of distribution within the occupied territories, but under the supervision and control of the Commission for Relief in Belgium. It is to be borne in mind that it was with great reluctance that the western allies permitted foodstuffs to pour into this area so completely controlled by Germany. Only on the understanding that these remained the property of the neutral Commission and under its control until fed to the people, could importations be continued. The Commission was under international obligation to maintain rigid justice in the matter of distribution. On the other hand, the Commission was of semi-diplomatic standing and enjoyed special privileges in the purchase and transmission of overseas food supply, in the immunity of its shipping, in securing the open door for its imports, and in monetary transactions.

It is readily conceived that the huge relief undertaking in its diplomatic phases alone was fraught with utmost difficulty and was always face to face with failure. The question as to which of the belligerents was legally and morally responsible for feeding a civil population in a position unparalleled in human experience; the military aspects of the economic weapon of food control; the transfer of food supply through war zones and over belligerent frontiers, and its distribution and the financial transactions involved therein, were obviously matters of the greatest importance to the combatants. All of the Commission activities were, therefore, subject to jealous supervision by both sides. Guarantees and undertakings of wide character as to food supply and its distribution to the civil population were exacted and were possible of execution only because of the admirable spirit and scrupulous good faith of all parties.

Upon America's entry into the war, although the C. R. B. remained unchanged outside, the American directors and delegates within Belgium and Northern France were necessarily withdrawn; and in May, 1917, a fourth committee was organized by Hoover to act for them within the occupied territories:

4. *The Spanish-Dutch Committee for the Protection of the Relief in Belgium and Northern France*, under the patronage of the Spanish Ambassador in London, the Spanish Consul-General in London, the Dutch Minister of Foreign Affairs, the Spanish and Dutch Ministers in Brussels, and the Dutch Minister at Le Havre.

After the Armistice and the withdrawal of the invading armies, a fifth committee was created:

5. *The Comité Général de Ravitaillement des Régions Libérées* (Comité Général), organized in November 1918, with headquarters in Lille, the active central committee for Northern France during the last months of the relief work, which gradually took over the function of the Comité d'Alimentation du Nord de la France.

ADMINISTRATIVE STRUCTURE

In its full development there were ranged under the financial and administrative superstructure of the Commission, series of emergency institutions, which on the outside consisted of nearly 2,000 committees throughout the world for the collection of gift food and money; and, in the distribution phase within Belgium and Northern France, nearly 5,000 separate committees dealing with food supplies, and an almost equal number dispensing charity. From the inception of the organization it was recognized that under the chaos of warfare, and with such ramifying international, financial, commercial, and benevolent complexities, adequate direction could only be accomplished through a structure based on individual initiative and decision. The ordinary method of charity organization—that is, by means of committees acting through paid or voluntary agents—was considered entirely inapplicable in such an emergency. Therefore, throughout the Commission, the functions of committees were mainly of a supervisory nature, chief executive responsibility resting on directors and department heads under the leadership of a chairman. The net result was an unusual degree of efficiency and discipline, furthered no doubt by the appealing nature of the labor and the consequent ability to enlist men of special character and experience suited to the varied requirements of the work. Except for some specialized branches and for clerical service, the whole organization was voluntary. The relief operation as a whole may be separated as between two phases: (1) the organization outside the occupied territories, which was charged with the mobilization of charity and the purchase and transportation of relief supplies; and (2) the organization within Belgium and Northern France responsible for the distribution of food and the care of the destitute.

RELIEF ORGANIZATION OUTSIDE THE OCCUPIED TERRITORIES

The Commission established its central office in London, with main branches in New York and Rotterdam. The mobilization of world's charity was accomplished through allied and associated committees located in the centers of population throughout the United States, Great Britain, Canada, Australia, New Zealand, India, South Africa, Holland, Italy, Spain, Argentina, Hawaii, the Philippine Islands, and elsewhere. The requirements of purchase and transport of huge quantities of foodstuffs demanded direct or agency representation in the principal markets and ports all over the world. For this purpose large technical staffs were maintained in London, with representatives at Liverpool, Falmouth, Bradford, and Hull in England. For four years Rotterdam was the transshipment port for all relief supplies, and here the Commission office consisted of a large technical staff managing the reception and forwarding of overseas cargoes as well as the purchase and transshipment of local produce. After the Armistice a subsidiary shipping office was established at the French port of Dunkirk and finally at the Belgian port of Antwerp. Agents of the Commission were maintained at Bergen, Norway, and at more distant ports such as Rangoon and Karachi, India, and Buenos Ayres and Rio de Janeiro, South America. The bulk of supplies was purchased in America, however, and reporting to the New York office were sub-offices or agencies at Chicago, Portland (Maine), Boston, Montreal, Norfolk, New Orleans, Galveston, and San Francisco. From time to time new offices were organized and others disbanded. In March 1915, after the operation was extended to include the provisioning of Northern France, an office was established in Paris facilitating contact with the French Government. In 1917, after America had en-

tered the war, an important office was set up in Washington, D. C. After relief operation in Europe had terminated and the liquidation of the huge enterprise was in hand, the New York office became the head office.

These offices and committees all over the world, concerned with the diversified operations necessary to the assembling of relief, whether charitable, food, shipping, or diplomatic, reported by cable or post direct or through New York to London. By especially privileged telegraph and courier service the London office maintained prompt communication through the belligerent lines with the Commission's Brussels office, from which the distribution of relief was administered.

RELIEF ORGANIZATION WITHIN BELGIUM AND NORTHERN FRANCE

With the partial recovery of the country from complete prostration after its invasion, the admirable organizing and administrative powers of the Belgians and French came into play, insuring vigorous local initiative and executive action. It is to be borne in mind that the problem of relief distribution was made extremely difficult by the presence of an occupying army, together with the foreign military and civil authorities who replaced the normal government. As the relief organization developed, it came in continuous conflict with imposed restrictions. The tactful and pervading presence of the neutral Americans and, in the later stages, of the Spanish-Dutch Committee, with inspiration and intercessions, made possible the functioning of the relief.

Corresponding to the Commission's policy of decentralization in the assembling of relief, was the policy of systematic decentralization pursued in the distributing phase. The normal political organization of Belgium and France lent itself admirably to this course. In both Belgium and Northern France the details of distribution and the care of the destitute were accomplished through local committees in each commune. These committees, headed by the burgomasters in Belgium and by the maires in Northern France, embraced communal officials as well as volunteers. In order to secure consolidation of control and simplification of relation between committees, the "Communal Committees" were grouped under "Regional Committees," and these in turn were grouped under "Provincial Committees" in Belgium and "District Committees" in Northern France. Each provincial and district committee was composed of members representing all sections of the province or district, and on it were one or two local delegates of the central committee, i. e., the Comité National. These provincial and district committees were the principal centers of stimulative activity and had decided autonomy in local matters, and on each of them, serving in an active directing and advisory capacity, were two or more American representatives of the Commission.

Questions affecting the country as a whole were, in Belgium, decided at regular meetings of delegates from the provincial committees with the executives of the Comité National and the American Commission. In Northern France, until the formation of the Comité Général after the Armistice, the realization of an active central committee was not possible, owing to difficulties of movement and other causes; and the Comité Français therefore existed mainly as an accounting agency, central control being exercised through the Brussels office of the American Commission.

The Commission's central office was at Brussels. Subsidiary offices were maintained with two or more American representatives at the provincial and district centers in Antwerp, Liège, Namur, Ghent, Mons, Libremont, Hasselt, Charleville, Lille,

Valenciennes, St. Quentin, Vervins, and Longwy. On May 1, 1917, the functions of the American representatives were taken over by the neutral members of the Spanish-Dutch Committee. After the Armistice special relief was administered in the devastated regions of Northern France, and in conjunction with the Comité Général an American central office was established at Lille and sub-offices with wide activity at Valenciennes, Cambrai, St. Quentin, Vervins, Charleville, and Longwy.

OPERATION ORGANIZATION

The operations divided themselves into three very definite and distinct forms of activity:

- (1) The provisioning of the entire population;
- (2) The conduct of financial relief and exchange operations;
- (3) The care of the destitute.

Therefore, three departments were created: the Provisioning Department, the Financial Relief and Exchange Department, and the Benevolent Department. This separation existed not only in the Commission itself but also in the coördinate and sub-committees wherever their interests extended to more than one function.

The Provisioning Department was charged with the duty of purchasing, shipping, and importing the necessary supplies to feed and clothe the entire civil population of over 9,000,000 in the occupied territories of Belgium and France. All of these supplies were resold to the population. The entire normal retail commerce in these imported commodities was displaced by the local voluntary committees mentioned above, which, acting under absolute control, issued the supplies direct to the civil population from 4,731 communal stores established for this purpose. In the resale of these imported goods a marginal charge above the actual cost was applied and the results of this margin charge, subject to provision for contingent loss and destruction, was credited to the Benevolent Department and devoted to the support of the destitute.

Through the operations of the Financial Relief and Exchange Department, money earmarked for individuals in Belgium was used abroad for the purchase of food-stuffs, which, when sold through the Provisioning Department in Belgium, released the cash whereby large sections of the community were rehabilitated in income, thereby stemming the tide of destitution.

The Benevolent Department was the agency through which the charity of the world was mobilized. Charitable funds as collected were applied to the purchase of relief supplies, and these, with gifts in kind, passed through the machinery of the Provisioning Department and were resold to the people. The entire realization on sales of such charitable goods was turned over again to the distributing side of the Benevolent Department, and this in combination with the credits received due to the marginal charges on ordinary sales, as mentioned above, served to provide the Benevolent Department with means of caring for the destitute.

By the combined operations of the Financial Relief and Benevolent Departments, all those members of the community who could not otherwise buy food were enabled to do so—or it was done for them—and they thus became customers of the Provisioning Department in precisely the same relation as those who had their own resources.

II. TERRITORY AND POPULATION

The accompanying map indicates the extent of the German drive through Belgium into France to the more or less stationary battle line on the west. The Germans had occupied some 20,000 square miles of Belgian and French territory enclosing a population of close to 9,500,000. On the east was Germany itself; on the south and west, the

battle line of the western front and the blockaded stretch of the North Sea; and on the north, a live-wire barrier separating neutral Holland from Belgium. For more than four years this condition existed. The American Commission alone, with its continuous stream of relief, was successful in penetrating the German ring to reach the encircled inhabitants in their distress.

GERMAN ADMINISTRATIVE DIVISIONS

The occupying German army divided the invaded territory into two main areas for the purpose of government and control of the native population. These political divisions were known as the Army Zone and the General Government Zone, and the German methods of control in these two zones were of different orders.

The Army Zone (*Étape*) included a wide area back of the battle front and embraced all of the invaded territory of Northern France, together with the major portion of the two provinces of Flanders in Belgium. A further division of this area known as the Operation Zone, comprised a comparatively narrow strip immediately behind the fighting lines. In the Army Zone, the government was directly in the hands of the German General Staff and the subsidiary military authorities. The occupying forces were divided into several armies, each with its own complete organization, which controlled, subject only to the supreme control of the Commander-in-Chief and General Staff, not alone the German officers and soldiers of the particular army in question, but also the native population and the land and products of the region occupied by the particular army. Each army, in a word, had a considerable autonomy as regards the administration of the territory occupied by it. Practically no movement of the native population across the boundary lines of the different armies was permitted. The entire Army Zone resembled a huge internment camp. To a small extent the local communal authorities performed their usual duties under the eyes of the military.

The General Government Zone embraced the balance of the occupied area. In this area the Germans set up a joint civil and military General Government with its seat at Brussels. The local communal and municipal authorities performed their usual duties with less restriction, and certain state functions, notably those of Civil Courts and Provincial Councils, were exercised by the Belgians themselves. There existed in this area a wider freedom, though entirely under control, of the General Government.

Certain limited areas in the General Government Zone which were severed from Belgium by the live-wire barrier between Belgium and Holland, were known as Frontier Zones. Small Frontier Zones of this character were located in the Provinces of Antwerp, Limbourg, and Liège, and for a short time the southern parts of the Provinces of Hainaut, Namur, and Luxembourg, adjoining the Army Zone, were designated as Frontier Zones by the Germans. Restrictions as to movements of the population were enforced in these areas much as in the Army Zone.

GEOGRAPHICAL DIVISIONS FOR RELIEF PURPOSES

The Commission divided the relief area into sections corresponding to the decentralization of its administrative organization. Where practical these subdivisions were based upon pre-war boundaries, but in a number of instances emergency considerations called for different procedure. The principal cause for deviation from pre-war divisions was the arbitrary lines established by the German occupying government. To a lesser extent, considerations of transport and density of population affected the determination of relief subdivisions. The primary division was between Belgian territory and French territory. The line of division was, of course, the frontier; but it is interesting to note that the Germans had "annexed" to Belgium two salients embracing the French section of the valley of the Meuse below Fumay, and the city and environs of Mauberge. For two years this "annexation" was in force and the relief of these two areas was administered, except for accounting, as part of Belgium.

Belgium is divided into nine provinces, but for purposes of relief the Commission set up eleven "Provincial Committees" responsible for the following areas: Antwerp, Brabant, Brussels Agglomeration, East Flanders, West Flanders (North), West Flanders (South), Hainaut, Liège, Limbourg, Luxembourg, and Namur. Brussels and suburbs thus had a provincial organization separate from the Province of Brabant, of which this city was a part. The areas of East and West Flanders in the Army Zone were divided into three provincial organizations in conformity with arbitrary lines established by the German military. The "annexed" French territory, mentioned above, was embraced by the Belgian provinces of Namur and Hainaut.

The occupied French territory comprised parts of the following French administrative departments: Nord, Pas de Calais, Somme, Oise, Aisne, Ardennes, Marne, Meuse, Meurthe and Moselle, and Vosges. All this area was within the Army Zone, and its division for relief purposes corresponded exactly with the division maintained by the German military without regard to the regular administrative line of departments and arrondissements. The Commission set up six "District Committees" responsible for the six areas into which Northern France was divided by the Germans, namely: Lille, Valenciennes, St. Quentin, Vervins, Charleville, and Longwy.

Provinces and districts were each further divided into regions presided over by regional committees, and these in turn into communal committees, as has been described. At various times boundary modifications were made transferring regions and communes to adjoining areas, or new communes near the fighting lines were added, or other communes were taken out of the relief area altogether, or entirely evacuated by changes in the position of the fighting lines. Within each of the regional subdivisions there existed one or more main warehouses maintained as part of the Commission's distribution organization, and from these the tributary communal stores obtained their supplies.

These regional centers and their connection by tram lines to the waterway and rail relief-distributing system are shown on the map following page 81.

At about the middle period of the relief the makeup of the provinces and districts with the included regions with their dependent group of communes was as follows:

BELGIUM

"I." PROVINCE OF ANTWERP			Regional Divisions	
<i>Population 1,004,854. Area 1,093 Square Miles</i>

POPULATION

The pre-war population of Belgium was close to 7,750,000. Emigration of the civil population before the invading armies coupled with the mobilization of the Belgian Army left some 7,400,000 Belgians within the relief areas. In the same manner, but to a greater proportional extent, the 2,500,000 normal population of Northern France prior to the occupation was reduced to about 1,900,000. As a result of these reductions the 9,300,000 who were left at the beginning of the relief period largely comprised women, children, and men over military age and, therefore, especially helpless in the face of the situation in which they found themselves. Furthermore, considerable numbers were displaced from their homes and were unable because of military restrictions to return. In this category were great numbers of French refugees who, fleeing to Belgium, had to remain there throughout the war.

As has been indicated, there was little movement permitted, though in the General Government Zone during the harvest seasons field laborers were recruited from the cities. In April, 1915, the military authorities removed 20,000 civilians from Lille to serve as agricultural laborers in the districts of Charleville and Vervins. With the exception of this enforced migration, the French inhabitants of the Army Zone remained in the localities where the invading armies found them.

INTERNATIONAL AGREEMENTS AND THE AMERICAN REPRESENTATIVES

As has been indicated, the relief operation rested on a complicated framework of diplomatic arrangements and guarantees. As a first step, the Commission secured official undertakings from the German authorities of the General Government and Army Zones in Belgium guaranteeing that the food supplies imported would be free from interference. As a second step, undertakings from the Allied Governments permitting such importations through the blockade were secured. These correlative undertakings with their exacting restrictions, under guarantees from the Commission itself, were the charter of the relief operation.

In December, 1914, the German military authorities in the General Government Zone made agreement not to requisition local food products which otherwise the Commission would have had to replace by imports. When the relief was extended to the population of Northern France, this agreement covered this territory also. The harvest of 1914, coming as it did at the time of the invasion, was uncontrolled; but at the instigation of the Commission a committee was formed embracing German, Belgian, and American representatives, which took over the 1915 and subsequent harvests of breadstuffs, ensuring equitable distribution to the civil population. In the Army Zone arrangements were set up between the Commission and the German General Staff providing for allocation to the civil population of a definite per diem ration from the local harvests, the whole of which had been taken over by the occupying army.

Only the basic undertakings have been mentioned; but as the operations progressed, agreements were made in great numbers, their forms modified and their scope enlarged. Throughout, it was the function of the American representatives to see that guarantees or agreements were maintained and supervisions over the processes of relief were so exercised as to enable the Commission to assure its diplomatic patrons of the observance, or call to their attention infractions of the undertakings.

The duties of the American representative in the provinces and districts may thus be summed up by the statement that it was his duty to see to it that within his prov-

ince the conventions between the Commission and the belligerent powers upon which the relief work was based, were observed; that, on the one hand, the imported merchandise was consumed solely by the civil population, and that the native products, guaranteed against requisition, were permitted to reach the same destination; that, on the other hand, the food and clothing were equitably distributed without waste, leakage, or individual favoritism, and that the prescriptions and rules necessary to this end were observed.

In the General Government Zone, wherein some freedom to the civil population was allowed, the American representative could travel about his province and observe the working of the distributing system. His communications with the Commission's central office at Brussels were good, and in this zone the Commission exercised a wide range of control. Successful endeavors were made to revive small industries related to the relief, and labor in the fields and on the roads was encouraged. The distribution of relief itself employed numbers of the population. On the other hand, except in the distribution of relief, no activities were permitted the population in the Army Zone. Each American representative was accompanied at all times by a German staff officer appointed for the purpose. He was obliged to secure military permit to move from region to region, and certain areas within the Operation Zone were entirely forbidden to him. Communications between districts were practically impossible, and communication with the central office at Brussels was dependent upon German permission and assistance. The effect of these restrictions was to throw large responsibilities on the local committees and the local American representative.

III. RELIEF PROGRAM

The problem of determining in a practical manner the nature and minimum amount of the imports required for so large a population living under such exceptional circumstances involved a wide range of considerations, some of which were outside the realm of pure dietetics. These considerations, upon which a program depended, included:

- (a) Character and habits of the population;
- (b) Available native products and normal supplementary requirements;
- (c) Minima that could be imposed without endangering life and health;
- (d) Shortage of overseas shipping, difficulties as to local transport, and the consequent necessity of importing commodities of the most condensed food value;
- (e) Difficulties of finance when the population itself could contribute but little in actual resources of gold value;
- (f) Restrictions imposed by Allied Governments incident to their blockade of Germany.

CHARACTER AND HABITS OF THE POPULATION

Belgium was the most highly industrialized state in Europe, and the occupied area of Northern France embraced the greatest industrial section of that country. As bearing on this statement, the following comparative statistics are of interest:

	Population per square mile (1913)	Exports and imports per capita (1913)
Belgium	652	\$209.00
Northern France	370	—
France (whole)	189	75.00
Germany	310	77.00
United Kingdom	374	151.00
United States	31	44.00

A rough estimate indicated that under 30 per cent of the Belgian population were directly or indirectly dependent upon agriculture, while in Northern France probably not more than 40 per cent was of this order. Industrial paralysis, therefore, resulted in more acute distress than would be possible in any other area of the world.

The Belgians and French are preëminently a wheat-bread, vegetable, and fat-eating people. Their dependence on wheat and its predominance in their diet in normal times, as compared with certain other nations, is indicated by the following:

	Local production	Percentage imported	Kilos consumed per capita per annum (seed eliminated)	Per diem consumption in grammes
Belgium	22%	78%	244	670
France (whole)	82%	18%	215	590
Germany	65%	35%	87	240
United Kingdom	8%	92%	163	445
United States	100%	Nil.	144	400

It should be borne in mind that the consumption of bread was larger in the lower than in the middle and upper classes and that the averages included children as well as adults. A reduction in the quantity available, therefore, affected the lower classes most, and, further, as voluntary curtailment of the children's portion does not usually take place, the load fell mainly on the adults. While there was normally a considerable production and importation of rye, barley, maize, and oats, these materials were consumed almost wholly as fodder or for brewing, the by-products from the latter operation also being utilized as food for animals. Cereal breakfast foods made from maize, oats, etc., were rarely used except among the wealthier classes. The consumption of potatoes and other vegetables, such as turnips, parsnips, cabbages, beans, peas, and onions was very high. The production, in normal times, of crude, unprepared vegetables amounted to over 2,000 grammes per capita per diem. The people, however, ate relatively little fresh meat, and their fat essential was mainly composed of pork products, in combination with butter and comestible oils. In an emergency, therefore, the providing of the critically necessary proteids, fats, and carbohydrates could be effected under three main headings: (a) bread and dried cereals; (b) green vegetables; and (c) fats, plus certain minor items such as salt and sugar.

The detailed discussion of the character of foodstuffs available and of those required might be dealt with under one grouping, but owing to different local conditions Belgium and Northern France must be considered separately.

BELGIUM

Breadstuffs. The normal position as to wheat (or flour in terms of wheat) was approximately as follows:

Locally produced, 410,000 metric tons per annum—22 per cent.

Imported, 1,490,000 metric tons per annum—78 per cent.

It was evident that, with a consumption of about 160,000 tons of wheat per month, the annual harvest would sustain the population for only about 70 days. The 1914 crop and the pre-war stocks were not only to some extent destroyed and absorbed through military operations by the occupying army, but they could not, in the circumstances, be brought under control and properly conserved. Therefore, comparatively little wheat was left at the time relief began in November, 1914. Although the normal consumption, as indicated above, amounted to over 650 grammes per capita per diem, it was thought that if a flour ration corresponding to the milling of 350 grammes of wheat could be provided, it would, with a high percentage of milling, suffice. Such a ration implied, until the harvest of 1915, the monthly importation for Belgium alone of about 80,000 tons of wheat (or its equivalent in flour).

As already stated, beginning with 1915 the local harvests of breadstuffs came under drastic control. The total of such materials in the General Government Zone (all Belgium except East and West Flanders) was placed under control of a committee comprising American and Belgian nominees of the Commission and the Comité National, together with representatives of the German authorities. It was decided that an appropriate proportion of each peasant's production should be set aside for seed and food for his family through the year and left in his possession. The excess was taken over at fixed prices by the Commission and distributed with imported material over a period of twelve months. By these means speculation was prevented and a proper distribution to the civil population secured. The quota of native bread grains

provided by this arrangement in the General Government Zone was 12,000 tons per month, and, in addition, about 620,000 people of the agricultural classes were placed in a position of security and relieved of concern, insofar as their breadstuffs were involved, by leaving in their hands a part of their crop. In the Army Zone, in Belgium, however, the entire breadstuff harvest was taken over by the German Army, which entered into an undertaking with the Commission to supply the local committees with a ration of 120 grammes of wheat per capita per diem (increased, the second year, to 180 grammes of flour, and reduced again, the third year, to 100 grammes of flour).

The normal imports of Belgium included a certain quantity of maize which was used mainly for fodder with the by-products of oil, etc. Owing to its economic and calorific value, however, this commodity was imported extensively by the Commission, the milled corn flour being largely mixed with wheat flour in bread-making.

Owing to their convenience in handling and their dietary and economic value, dried peas, beans, and lentils were especially well suited to the situation. Rice offered similar advantages, and was a useful addition to bread and dried vegetables; and both these commodities were imported by the Commission in large quantities. The normal consumption of these in metric tons, was as follows:

	Local production 1912	Imported 1912	Total consumption 1912
Beans and peas	24,000	55,000	79,000
Rice	Nil.	21,000	21,000
Total	24,000	76,000	100,000

Vegetables. Belgium normally produces its own requirements in vegetables, except in the above articles. Absorption by the occupying forces, coupled with larger consumption by the civil population because of the diminishing food-supplies of other character, resulted in a shortage of vegetables before the arrival of the 1915 harvest. In order, therefore, to control prices and supply deficiencies, some 18,000 tons of potatoes were imported during the spring of 1915; also, large quantities were bought locally in regions with an excess supply and either utilized in the soup-kitchens and canteens or resold where shortage existed. The 1915 potato harvest in Belgium was apparently larger than usual, because of the planting to a considerable extent of potatoes instead of sugar beets. The control of the native potato crop, however, was not such as to ensure good storage or equitable distribution, and there were long periods both in 1916 and in 1917 when Belgium was practically without potatoes. During the height of the submarine warfare in 1917 when overseas shipments were drastically curtailed, the Commission secured large quantities of vegetables, both fresh and preserved, from Holland, where, fortunately, an exportable surplus was available.

Animal and Grease Products. This group is one of extreme complexity, and of wide and varied ramifications. It may, in the first place, be recalled as a hygienic fact that no population can be effectively maintained without fats in some form and in considerable measure. The Belgian people, before the war, had a sufficient number of animals to afford the bulk of their meat and fat requirements, but these animals were to a very large degree dependent upon the importation of fodder. The position

as it then was and as developed under the influence of warfare will appear from the following tables and remarks:

The net imports in metric tons of meat and fat products, 1913, were:

MEAT	
Live cattle	35,383
Fresh meat	8,740
Preserved fish	26,578
Fresh fish	22,608
Eggs, etc.	4,648
	<hr/>
	97,957
FATS	
Lard and bacon.....	3,291
Other animal greases.....	7,906
Butter	5,613
Comestible oils	9,215
	<hr/>
	26,025
Total.....	<hr/>
	123,982

In addition, some 15,000 tons of nuts were imported for the manufacture of edible oils. The effect of the cutting off of these meat and fat importations, coupled with the condition of rapidly diminishing availability of native fats due, as will be seen, to lack of fodder, placed the item of fats in a most important position on the Commission's program of importations.

The Livestock Situation. The maintenance of the meat, milk, and butter supplies was directly involved with the problem of fodder supplies, and indirectly the whole problem of provisioning the people was dependent upon the maintenance of at least a minimum of animals.

The following table shows the average normal imports of materials which were chiefly used either directly or indirectly for fodder:

	Net annual imports metric tons
Rye	120,000
Barley	350,000
Oats	130,000
Maize	550,000
Linseed and other cake.....	200,000
Cattle-feed from milling imported wheat....	370,000
	<hr/>
Total.....	1,720,000

The Commission was unable at any time during the war period, to import fodder as such. The best it could do was to supply bread-making materials in the form of wheat, rye, and maize, rather than milled flour. Owing to the shortage of these and the necessary extremely high rate of milling, little animal food resulted. The fodder problem was further complicated under war conditions by the demands of the occupying armies and by the much decreased sugar-beet production, which diminished one of the important local sources of fodder by-product.

The normal number of food animals is indicated by the following pre-war statistics:*

Milch cows	433,000
Other cattle	946,000
Sheep and goats.....	600,000
Pigs	1,494,000
Chickens	12,144,000

There was, of course, a great decrease in the stock of animals due to the shortage of fodder, as indicated above, and (during the first year) to the purchase and requisitions of the military authorities. Estimates of the decrease in livestock to the date of the Armistice, November 1918, vary from 30 per cent to 50 per cent for cattle, 50 per cent to 60 per cent for pigs, and 20 per cent to 30 per cent for chickens. Aside from the diminution of meat supplies, other unfortunate results were the depletion of dairy herds and animals.

Owing to the enforcement of legal maximum prices at public sales of provisions, the shortage of food supplies cannot be demonstrated from current prices. The effects of diminution are evidenced by:

1. Shortage of milk-supply;
2. Insufficiency of fats, reflected in the much reduced supply of
 - (a) Pork products and meat,
 - (b) Butter,
 - (c) Oleomargarine, for want of tallow,
 - (d) Soap.

Although the shortage in milk-supply was pronounced in the winter of 1914-1915, the effect of the consumption of capital in milk-animals did not become seriously apparent in this form until the spring. During the summer the green feed somewhat stemmed the tide by affording a better supply of both milk and butter. With autumn, however, there was an insistent and increasing demand for imports of condensed milk, and for bacon and lard in substitution for butter and other fats generally. After 1916 the middle and poorer classes were provided with a full ration of fats, leaving the local products to the wealthier classes.

Sundries. This group, including sugar, coffee, cocoa, etc., did not at first call for much consideration from an import point of view, but more attention was given it in the later years of the relief.

Belgium normally produces about 250,000 tons of beet-sugar and consumes about 150,000 tons. Until the 1915 harvest there was a sufficiency. Of that harvest, however, only 55,000 tons was available for the civil population, and eventually importations were necessary.

There were large stocks of coffee in Antwerp and Holland at the outbreak of the war, and at first there was no demand in Belgium for importations by the Commission. Large local purchases, however, were made from time to time for redistribution, and in the last years coffee became a considerable item in the program of imports. Salt was imported at the outset, but local commercial agencies eventually secured supplies from Germany, thus eliminating this commodity as a matter of concern.

* There were 317,000 horses in Belgium in January, 1914

NORTHERN FRANCE

The following estimate of the annual pre-war production of certain food-supplies in the occupied region has been deduced from the publications of the French Department of Agriculture for 1912:

	Metric tons
Wheat	700,000
Rye	55,000
Barley	41,000
Oats	390,000
Potatoes	540,000

The same source of information gives the number of animals as:

Cattle	490,000
Sheep	1,050,000
Horses	216,000
Pigs	202,000
Goats	40,000

It would appear that in normal times this section of France was self-supporting in breadstuffs but deficient in potatoes, beef, and pork.

Pre-war statistics, however, so far as this region is concerned, were of but academic interest; their significance was obliterated by the continued operations of the world's greatest armies in the area under consideration. As a first result there was such destruction and absorption of the 1914 harvest through military operations that by February, 1915, the whole area was short of foodstuffs, and in certain districts there was acute suffering. Although the most destitute centers received some earlier help through Belgium, resources could not be found to provide supplies until the end of February, 1915; provisions could not generally be made available until April, 1915, and in the early stages they consisted mainly of flour.

Owing to mobilization of the able-bodied men, destruction of work-cattle, and shortage of fertilizers, the 1915 harvest of cereals was of relatively small importance. Furthermore, large areas were cultivated by the German army for its own uses. In the end the whole harvest was requisitioned by the German Military Authority. Subsequently, as already stated, an agreement was arrived at whereby a ration of 100 grammes of flour, 82 per cent milling, per capita per diem was furnished by the Military Authority to the district committees for distribution to the population out of local production. The cattle were mostly gone and the urban population was practically without meat, butter, or other fats. The potato crop also was of much reduced dimensions, the local supply being equal to a ration of only 190 grammes per capita per diem. Salt, sugar, soap, and coffee were exhausted and had to be imported.

Lighting supplies, such as petroleum and candles, were exhausted, and outside the cities (electrically lighted) the people retired at dark.

PROGRAM OF IMPORTS FOR THE ENTIRE RELIEF AREA

From a consideration of the available native products and the normal supplementary requirements it was possible in the early days of the relief operation to establish on paper a theoretical program of imports such as would supply the bare necessities and yet not demand devastating inroads into food capital. Such a program reduced to the monthly requirements for the entire population may be expressed in terms of (a) Bread Grains, (b) Subsidiary Cereals, (c) Fats, and (d) Sundry Foods.

The following table presents an early estimated program of this character. Comparison between this ideal monthly program with the average monthly imports by the Commission during the entire relief period is also shown.

	Metric tons per month		Deficiency per month
	Ideal program	Actual imports average for 1 years 10 months	
(a) <i>Bread Grains</i>			
Wheat, rye, barley, and maize for milling .	100,000	64,175	35.8%
(b) <i>Subsidiary Cereals</i>			
Rice, peas, beans, and lentils. . .	15,000	8,429	43.7%
(c) <i>Fats</i>			
Fat bacon, lard, butter, fish, and meat.	9,000	7,044	21.7%
(d) <i>Sundry Foods</i>			
Sugar, milk, cocoa, coffee, and soap. . .	6,000	5,657	5.7%
Totals.	130,000	85,305	34.4%

The ideal program would have demanded a total importation of foodstuffs for the four years and ten months, of 7,540,000 tons. The actual shipments into the occupied territories during the relief period were 4,986,524 tons from which must be deducted 38,736 tons of clothing and miscellaneous non-foodstuffs, leaving a balance for comparison of only 4,947,736 tons, or a deficiency of 34.4 per cent. The figure for average monthly imports as shown by no means presents a day-to-day picture of the situation. The Commission found it impossible to maintain a steady flow of imports. Month by month, and even quarter by quarter, there would be variations of 10 to 50% in the imports. An examination of the actual monthly shipments on pages 189 to 202 (Part II) will illustrate this. The most trying period extended over the months of March, April, May, and June, 1917, when the effects of the German unrestricted submarine warfare were felt and the shipments into Belgium and Northern France dropped to 12,199 tons, 46,152 tons, 35,375 tons, and 65,466 tons, respectively, compared with the average of 85,305 tons. In a country with no food reserves, such interruptions, in an already restricted flow of imports, caused immediate and acute distress.

There was never a probability that the Commission could realize an ideal program such as is shown. The direct result of deficiencies forced deep inroads into food capital. High milling rates of bread-grains and the necessity of using the maximum possible of imports for human food left little for fodder, and, consequently, livestock and milk herds were slaughtered. The result was that an additional class of foodstuffs in which the people had been, for the most part, self-sustaining, were, of necessity, imported. Insofar as possible, the quality and quantity of actual imports were varied to meet these changing demands. In the above comparison, the smaller deficiencies in *Fats* and *Sundry Foods* portray the great extent to which actual imports of these commodities were increased over the early requirements.

THE PERMITTED PROGRAM

The practical causes which defeated the realization of the ideal program were, (a) restrictions on imports imposed by Allied Governments, (b) shortage of funds, and (c) shortage of shipping. The Allied Governments were enforcing a strict blockade of Germany, while the Commission had to draw on the food, financial, and shipping resources of these governments in order to provision a population under the actual control of Germany. In the early days a general approval by

the British Foreign Office of the Commission's program in reference to the blockade was required, and at no time was the Commission permitted to attempt to build up a reserve of foodstuffs inside Belgium and Northern France. Later on the shortage of food available for the Allies became serious and caused further restrictions in the Commission's freedom in its program. The Commission was never free from financial difficulties. In the early days the Commission encountered no insuperable difficulties in chartering ships to carry its supplies, as it drew largely on neutral shipping; but the threat of unrestricted submarine warfare withdrew neutral bottoms from the seas and the effectiveness of the warfare itself was immediately felt. The Commission was finally allocated tonnage from the Allied shipping pool on a basis of its minimum day-to-day program requirements.

What was known as the Permitted Program in this way came into being in the early days of the relief operation. This was by no means fixed, but was changed frequently for practical reasons, as indicated above, and to meet the dietetic and rationing demands of the population served. The table on page 25 illustrates the Commission's analysis of the situation in November, 1917. To the Permitted Monthly Program which the Commission hoped to fulfill by importations is added the estimated quantities of native produce, and the total availabilities are reduced to a basis of minimum monthly per capita rations for the people of Belgium and Northern France. The diagram on page 26 shows comparisons between the ideal program, the permitted program, and the Commission's actual importations during the entire relief period.

DIETETICS

Students of dietetics will no doubt be interested in this gigantic experiment in restricted feeding. The purely physiological point of view, calling for a balanced supply of protein, fats, and carbohydrates, must yield to the limitations imposed by the insurmountable practical difficulties of meeting a balanced and sufficient program.

In Belgium the bread ration was universal, but most of the other imported supplies were at first rationed only to the destitute and those with very limited means. In Northern France the whole population was dependent upon provisions imported by the Commission, and a fixed ration was maintained. As the table on page 25 shows the ration which it was hoped to issue would have provided daily 62 grammes of protein, 63 grammes of fats, and 343 grammes of carbohydrates, with a combined heat value of 2,141 calories against a normal requirement of say 3,000. Owing, however, to the great reduction in actual imports, the population lived on less than 2,000 calories, and the situation was never without anxiety.

CLOTHING AND MISCELLANEOUS

In normal times Belgium imports the great bulk of its textile materials. At the end of the first year of the war the supply from local sources was exhausted and the people became dependent upon imports for renewals. Great quantities of gift clothing and huge purchases were imported by the Commission.

Under the miscellaneous classification came thousands of items necessary for the life of a country. Flour mills, factories, and small industries operating as part of the relief were maintained only through the importation of machinery parts, belting, etc. Motor spares, tires, oil, lace thread, etc., and quantities of medical supplies formed other classes of importations, and, in the later days after the Armistice, barracks and household equipment were imported for temporary structures in the devastated areas.

IV. PURCHASE AND TRANSPORTATION OF FOODSTUFFS

Because of the almost total prohibition of export from belligerent countries and in order to secure the maximum of economy in purchase, foodstuffs to meet the program of importations, were chiefly assembled from primary markets overseas. In the operating organization of the Commission, it was thus necessary to separate, to some extent, the matters of purchase and transportation. The latter was taken care of almost entirely from the London office, whereas purchases were made by the various offices of the Commission in those countries where the foodstuffs were available. In all matters of purchase and transport, however, the same lines of policy were recognized as of cardinal importance, and were consistently and persistently pursued. These general lines may be stated as follows:

- (a) Voluntary direction;
- (b) Constant resort to governments, commercial firms, banks, and transportation companies for advice and concessions;
- (c) The purchase of supplies on a large scale in primary markets;
- (d) The chartering and control of shipping solely for the Commission's service and under protection of the Commission flag.

VOLUNTEER SERVICE

In pursuance of these policies the executive work was carried on by volunteers of wide commercial experience, who whole-heartedly rendered invaluable services. Most of the departmental heads and many assistants, especially in the European offices, were also volunteers, paid men being employed only in certain specialized branches for which no experienced volunteer service was available. The total overhead expense of the Commission was considerably less than one-half of one per cent on the total value of supplies shipped to Belgium and Northern France, affording ample proof of the services thus rendered.

Purchases were carried out by the Commission in the centers of production throughout North America, the Argentine, and India. In this work the Commission had much expert and valuable assistance from commercial firms, transportation agencies, and local committees interested in Belgian relief. Most of the firms engaged in commercial operations on behalf of the Commission either returned their fees or made no charges. Inland purchases and conveyance from America, Canada, and the Argentine necessitated extensive rail transportation arrangements, in which connection the Commission enjoyed many generous concessions in rates and a large amount of entirely free transport, to say nothing of continuous and general favors in the way of extra facilities as to handling and delivery.

The chartering and management of an entire fleet of vessels, together with agency control practically throughout the world, was carried out for the Commission quite free of the usual charges by large transportation firms who offered these concessions in the cause of humanity. Banks generally gave their exchange services and paid the full rate of interest on deposits; insurance was facilitated by the British Government Insurance Commissioners; and the firms who fixed the insurance subscribed the equivalent of their fees. Harbor dues and port charges were remitted at many points, and stevedoring firms made important concessions in rates and afforded other gen-

erous services. In Holland exemption from harbor dues and telegraph tolls was granted and rail transport into Belgium provided free of charge. The German military authorities in Belgium itself abolished custom and canal dues on all Commission imports, and reduced railway rates one-half.

THE PROVISIONING DEPARTMENT

As has been mentioned previously, it was the function of the Provisioning Department of the Commission to handle the purchase and transportation of all supplies. The department was organized and operated as a huge business enterprise with no relaxation from businesslike methods in any of its movements. The measure of the value of volunteer service and concessions—and this indeed was the true certification of its work—was the low price at which foodstuffs were delivered to the consumer in Belgium and Northern France.

For the period of relief the Provisioning Department of the entire relief organization throughout all its branches purchased goods well over \$1,300,000,000 in value. This huge total includes acquisition and interchange of native produce handled through the internal Belgian and French Committees. Limiting the transactions to those for which the Commission was directly responsible in accounting to the world, an amount of over \$927,000,000 was involved. Provisions to the amount of 5,174,431 metric tons were imported and distributed for relief purposes at a purchase value of \$642,451,917.81. Transportation expense, including insurance and warehousing, involved an additional cost of \$165,239,023.32. Furthermore, the Provisioning Department purchased and transported 209,096 metric tons of supplies which, being either sunk or sold en route on government orders, were diverted from the relief. The Commission's incidental transactions of this character, including subsidiary port enterprises such as the operation of grain elevators and warehouses, if presented in the accounts in gross amount instead of in balance, would raise the total involved to well over \$1,000,000,000.

OVERHEAD AND ADMINISTRATIVE EXPENSE

The Provisioning Department carried the full load of overhead and administrative expense for the organization. The entire cost of the organization of the Benevolent Department in both its collecting and distributing phases, and including a large burden of the cost of administration of Allied and Associated Appeal committees all over the world, was borne by the Provisioning Department. In this manner the donors were assured that the exact value of their contributions reached the destitute.

The total cost of overhead and administration was \$3,908,892.74, representing 0.43 per cent of the cost of operations.

FOODSTUFF PURCHASES AND GIFTS

The main constituents of the Commission program of purchases were bread grains, cereals, and fats. The economic policy of placing huge purchases in primary markets was adopted, necessitating at the same time the chartering and management of great numbers and tonnage of ships. Some of the world's centers of production were closed at the outbreak of the war. In the early days America, Argentina, and India were open to the Commission, but owing to the gradual depletion of the world's shipping by mines and by submarines the Commission was forced to conform to the Allied policy, which concentrated shipping in the service of supplies in

the Atlantic during the last years of the war. The sources of financial support affected the Commission's purchase market to a certain extent also, as the Commission adopted the policy (modified only by questions of economy in meeting its programs) of spending charitable funds in the country of origin. This policy applied in part to government subsidies as well, and after America's entry into the war and American subsidies became available, these were of necessity expended on American produce. Summarizing the detailed statement on pages 28 and 29 (Part II), the following statistics give in metric tons and percentages the principal country of origin of all relief supplies.

	United States	Canada	Argentina	United Kingdom	Other countries	Total
First Year ..	443,718 45.1%	136,625 13.9%	226,324 22.9%	19,256 2.0%	157,885 16.1%	983,808

Total	3,116,271 60.2%	1,000,666 19.4%	418,046 8.1%	198,047 3.8%	441,401 8.5%	5,174,431

The world in its first shock of realization of the plight of Belgium gave great quantities of food and clothing. In the early days many of these gifts in kind which originated in America were presented in shipload lots, but for the most part committees throughout the United States and Canada collected small parcels. The Commission freely undertook the transportation of these gifts in food and clothing from all inland points, thus further increasing the labors of the transportation departments of its main branches.

After the first year of operation, the immense detail of distributing innumerable classes of gift foods forced the Commission to ask that gifts in kind be limited to staples which comprised its program, eliminating the so-called luxuries, such as tinned foods. Appeal committees and the public throughout the world coöperated wholeheartedly in this policy, with the result that their support became mainly financial—except in the fourth and fifth years when the immensely valuable contribution of used clothing was forthcoming. Quite apart from charitable assistance in cash, the Commission handled gifts in kind to the extent of 121,455 metric tons, representing 2.3 per cent of the total of 5,174,431 metric tons of relief goods imported into Belgium and Northern France. More detailed analyses are given later, but the following statistics show the acquisition of gift food and clothing year by year:

	Gifts in kind Metric tons		Total
	Food	Clothing	
First Year ..	91,296	2,077	93,373
Second Year ..	12,893	356	13,249
Third Year ..	4,598	66	4,664

Expressed in terms of value, 89.5 per cent of these gifts originated in the United States, 9.7 per cent in the British Empire, and 0.8 per cent in Holland, Belgium, and elsewhere.

QUALITY OF SUPPLIES

As all supplies imported into Belgium and Northern France were issued in quantity below the normal human demand, it was obvious that the introduction of inferior articles would inflict peculiar hardship. The ordinary safeguard of quality, namely, the inability of the retail merchant to dispose of inferior goods, disappeared; and it became of the utmost necessity that every means should be employed to maintain the very highest quality obtainable. Merchants throughout the world responded to appeal in this particular, and the result was a remarkable freedom from complaint. As additional safeguards, the New York and Rotterdam offices each maintained a staff of inspectors, and every shipment underwent the closest scrutiny.

OVERSEAS SHIPPING

For the first four years until the Armistice, the neutral port of Rotterdam was organized as the transshipment port for supplies destined for both Belgium and Northern France. After the Armistice the ports of Antwerp and Dunkirk were available. It is thus seen that during the war relief steamers had to pass through the most dangerous areas of the English Channel and the North Sea. Both these areas were blocked out by anchored mine fields and strewn with floating mines. In these seas and their approaches, the German submarines were most active. As before stated, all the belligerent governments agreed to the complete exemption of the Commission's shipping from attack. This entailed supplying each steamer at the port of departure with a German Safe Conduct Pass, furnished in Allied countries through the properly authorized neutral diplomatic office, and in neutral countries by the German government officials. For ease in identification all steamers carrying relief cargoes flew the Commission's flag and carried vivid C. R. B. markings to show the nature of their

*"S.S. Tredegar Hall." Maize 5,829 tons
From San Pedro, Argentina. Rotterdam Arrival 547. September 18, 1915*

employment. In addition to huge white lettering painted on their sides or great tarpaulin signs fixed thereon, each vessel was furnished with signal balls and acetylene light signals of a special character agreed upon between the belligerents. The conspicuous distinguishing markings which every relief steamer carried are illustrated in the accompanying pictures.

The Commission's ships always enjoyed the promise of shipping immunity but this was never secured without compliance with restrictions laid down by both the Germans and the Allies. During the first few months the Commission was permitted to charter only neutral steamers. Later the Germans extended their guarantees of immunity to any vessel carrying relief for Belgium and flying the Commission's flag and carrying its markings.

In addition to the German Safe Conduct Pass which specified prohibited routes the master of each steamer was supplied with definite sailing instructions by the British Admiralty. This latter was absolutely essential on account of mine fields which were continuously shifted in the North Sea and English Channel. In the early days all relief steamers from overseas passed through the English Channel in proceeding to the Commission's port of Rotterdam. Each vessel, however, called at some port in England, usually Falmouth, for inspection and sailing directions, and relief vessels outward bound from Rotterdam were permitted by the Germans to bunker at English ports. These relaxations on the part of the Germans for their declarations of submarine warfare in 1915 and 1916 were only secured by the Commission after considerable negotiation. The German declaration of unrestricted submarine warfare was put into effect on February 1, 1917, and though the Commission exerted every effort to secure concessions which it had won in 1915 and 1916, these endeavors were doomed to failure. The whole of the shipping arrangements had therefore to be modified.

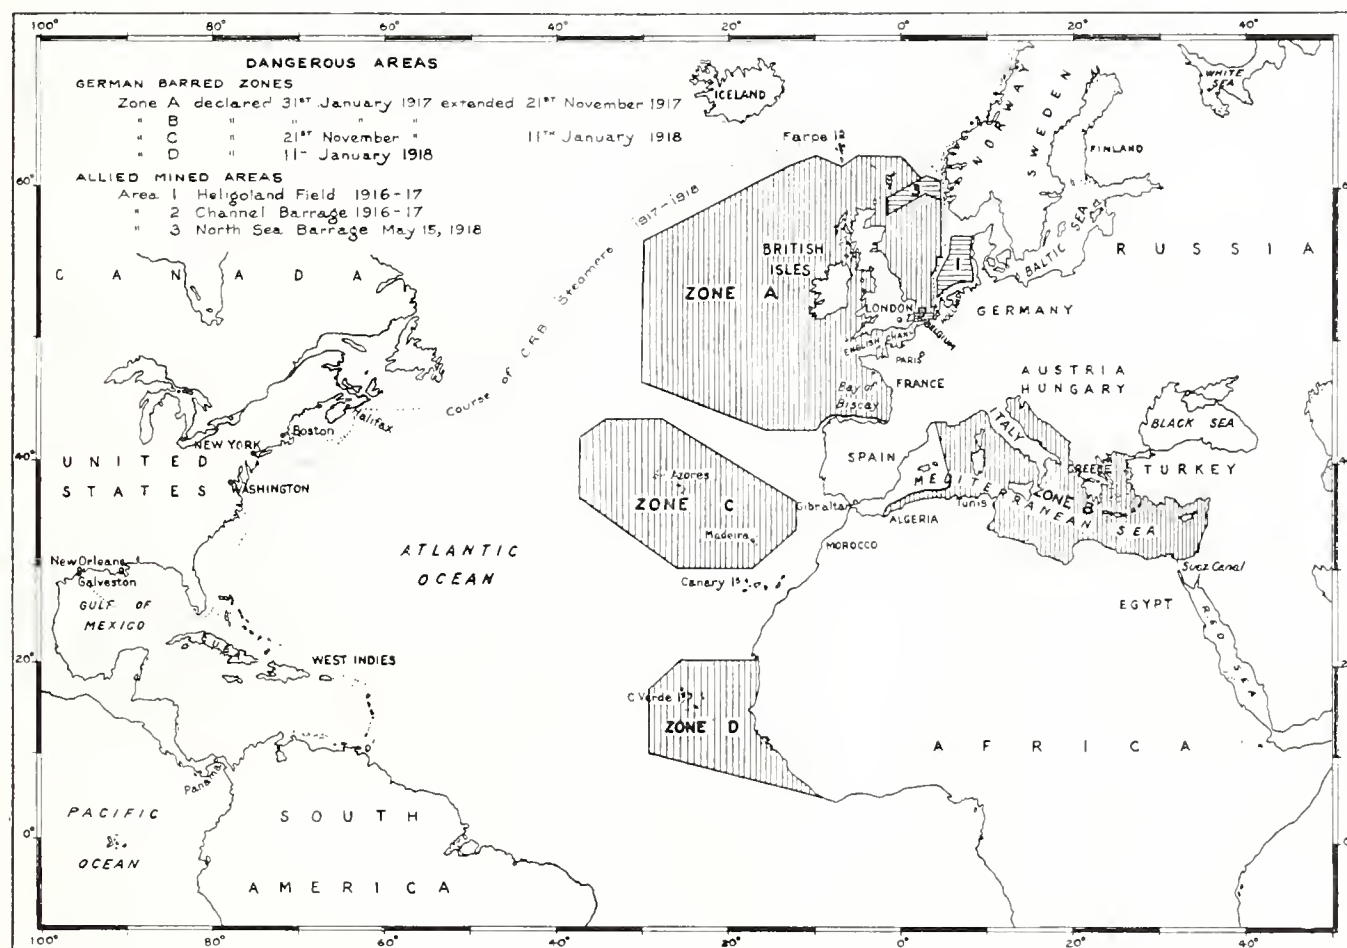

DAINGEROUS AREAS

The restricted route is indicated on the following map showing the location of the danger zones during the height of the submarine war in 1917-18. It will be noted

*"S.S. Atland," Wheat 7,030 tons
From Philadelphia. Rotterdam Arrival 961. April 28, 1916*

that the German zones entirely encircled the British Isles. The English Channel was completely closed. The only approach to Rotterdam for overseas steamers was far to the north, around the Faroe Islands to the coast of Norway and thence southward following an extremely narrow lane between the German danger zone and Allied mine fields. Not only was the length of voyage increased by over 1,000 miles but the previously allowed bunkering facilities at English ports were eliminated. The result of this latter restriction was that the Commission had either to supply its steamers in the United States with sufficient bunkers to last the full round trip—to great curtailment of cargo space—or to secure an inferior grade of bunkers through the Germans at Rotterdam.

Vessels still had to call at some British port for inspection and to accomplish this they had to go far off their direct course to call at Halifax, N. S., or (in the case of South American cargoes) at Sierra Leon, West Africa. It can be readily seen that the direct result of this new order of things was an immense increase in the amount of ships tonnage necessary to deliver the Commission's program.

During the first two years the Commission secured great quantities of foodstuffs through the London market, transshipping these in small cross-channel boats from English ports to Rotterdam. During 1915 and 1916 the Germans permitted this with various restrictions, but in the spring of 1917 this route was made prohibitive and for many months none of the Commission's stocks in the United Kingdom were shipped across the North Sea. Eventually after extended negotiations an extremely limited service was rearranged but it was necessary to convoy the cargo boats by British destroyers or transformed trawlers.

Kaiserlich
Deutsche Botschaft

B 1582/17.

Auf Grund der zwischen der Kaiserlichen Regierung und der Regierung der Vereinigten Staaten von Nordamerika getroffenen Vereinbarung becheinigt der unterzeichnete Kaiserliche Botschafter, daß der

Dampfer: " T R E V I E R "

Führer: Octave Lemaitre

Heimathafen: Antwerpen, Belgien,

Unterzeichnungssignol: M B V Q

uneigentlich Güter der „American Commission for Relief in Belgium“ für die notleidende Zivilbevölkerung in Belgien an Bord hat.

Der vorstehende Geleitsbrief ist unter folgenden Bedingungen ongestellt worden:

1. Er ist nur für die gegenwärtige Reise gültig und muß unmittelbar nach Aufnahr in einem niederländischen Hafen dem dortigen Kaiserlich Deutschen Konsul oder in Ermangelung eines solchen dem Kaiserlich Deutschen Gesandten im Haag abgeliefert werden. Letzterer wird für die Rückreise ein ähnliches Zeugnis ausstellen;
2. Der Schiffer hat sich ehrenwörtlich verpflichtet, auf der Hin- und Rückreise aller Handlungen sich zu enthalten, die eine Unterstützung der Feinde Deutschlands darstellen könnten;
3. Die Schiffe der Kaiserlichen Marine haben das Recht, das Schiff zu durchsuchen; die Ladung muß so verpackt sein, daß eine Untersuchung leicht und schnell möglich ist;
4. Bei Nichterfüllung der vorstehenden Bedingungen verliert das Schiff alle Rechte einer vorzugsweisen Behandlung.

Es wird empfohlen, den Weg nördlich um die Shetland-Inseln zu nehmen. Wegen Minenfahr wird dringend vor dem Weg durch die von der deutschen Regierung als Kriegsgebiet erklärten Gewässer, insbesondere den englischen Kanal, gewarnt.

Sicheres Geleit bezieht sich nur auf den Seeweg ausserhalb des von Deutscher Regierung am 1. Februar 1917 bekannt gegebenen Sperrgebiets um Grossbritannien und Frankreich.

Washington D.C., den 2. Februar 1917.
Der Kaiserlich Deutsche Botschafter .
Im Auftrage.

Dieser Geleitschein wurde heute dem Führer des Dampfers "TREVIER" ausgehändigt.

New York, den 2. März 1917
~~Der Vertreter des Generalkonsulats~~
SCHWEIZER KONSULAT NEW YORK
für die Abteilung zur Wahrung
der Deutschen Interessen

Ernest Keller

Samuel
Kaiserlicher Gesandter.

The following is a translation of the German Safe Conduct Pass reproduced on the preceding page:

GERMAN EMBASSY

B1582/17

The undersigned Imperial German Ambassador hereby certifies on the strength of the arrangement concluded between the Imperial Government and the Government of the United States of America that the

Steamer: "TREVIER"

Master: Octave Lemaitre Port of Registry: Antwerp, Belgium,

Official Number: M B V Q

has on board exclusively goods of the "American Commission for Relief in Belgium" intended for the suffering civil population in Belgium.

The present pass is issued upon the following conditions:

1. It is valid for the present outward voyage only and must be delivered immediately upon arrival in a Dutch port to the local Imperial German General-, Vice-, Consul or the Imperial German Minister at The Hague if there is no such Consul at the port of destination. The German Minister at The Hague will issue a similar certificate or pass for the return voyage.

2. The Master has undertaken upon his word of honor to abstain during the outward and return voyage from any and all actions that may involve assistance to Germany's enemies.

3. Vessels of the Imperial Navy have the right to search the ship; the cargo must be stowed in such a manner as to permit of a rapid and easy search.

4. In case of non-compliance with the above conditions the ship loses all right of preferential treatment.

On account of the danger from mines it is strongly recommended to take the course north of the Shetland Islands, and NOT through the waters declared as war zone by the German Government, particularly the English Channel.

Safe conduct only comprises the navigation routes outside the blockade around Great Britain and France proclaimed by the German Government on February 1, 1917.

Washington, D. C., February 2, 1917.

For the Imperial German Ambassador.

This pass has been delivered today to the captain of the S.S. "Trevier."

New York, March 2, 1917.

Signed: HANIEL,
Minister Plenipotentiary.

Swiss Consulate New York.

For the department for the protection
of German interests.

Signed: ERNEST KELLER.

It will be noted that this safe conduct pass was delivered to the master of the S. S. Trevier for this trip by the Swiss consul in New York, as at this time the diplomatic interests of Germany had already been taken over by the Swiss government officials. The S. S. Trevier sailed from New York with a relief cargo of 4,329 tons of wheat on March 5, 1917, during the height of the unrestricted submarine warfare which had been announced by the German Government on February 1, 1917. The vessel was sunk by torpedo in the North Sea on April 5, 1917. As may be inferred from the master's story of the voyage which is quoted below, the master had lost his bearings in the extremely narrow safe lane off the entrance to the port of Rotterdam whither the vessel was bound, and it is possible that it was just entering or just leaving the prohibited zone when attacked.

"Ymuiden, April 12, 1917—2 p. m.

"Report given by Captain Lemaitre of the Belgian Steamer 'TREVIER' on his voyage from New York to Rotterdam.

"My steamer was loaded in New York on March 1st with a full cargo of wheat consigned to the Commission for Relief in Belgium. On the 2nd of March I went to the German Consulate and obtained a safe conduct pass, which I enclose. The Consul drew my special attention to the war zone, as proclaimed on the 1st of February by the German Government, and showed me instructions containing the limits of the blockaded submarine war zone. I had also obtained information regarding the war zone declared by the German Government from Messrs. A. W. Duckett & Co., who had obtained this information from Captain Delplace of the S.S. 'EBUROON.' Captain Delplace had copied it in the German Consulate, and, on my comparing the particulars with the instructions as shown me by the Consul, I found the particulars to be quite in conformity therewith. Copy of Messrs. Duckett's memorandum you will find enclosed.

"I stayed in New York for repairs and left immediately after they were completed on the 5th of March. I proceeded to Halifax, in accordance with instructions given me by the British Consul, and I arrived at Halifax March 8th, 5:20 p. m., and anchored there. My ship was carefully searched by the British Admiralty, and I received permission to proceed on March 12th at night. I left Halifax on the 13th, 8 a. m., and went to Louisburg for bunkering. No instructions of whatever nature were given to me when at Halifax. I arrived at Louisburg on the 14th of March, 8:50 a. m., and, after having bunkered, left on the 15th. The Commander of the Transport Service came on board and we together had a look at the charts, where the position of the 1st of February blockaded zone had been indicated by the first officer.

"I passed Udsire on April 1st at 10:25 p. m. On April 3rd, shortly after 11 a. m., I sighted a light vessel on the starboard bow, and, on coming nearer, I read 'Doggersbank Zuid.' Not knowing there was a lightship there, I signaled for its position, which he gave me; namely: latitude: 54°-45' North; longitude: 4° 15' East of Greenwich. I was surprised to find a lightship in this position, as, according to the information given me at the German Consulate in New York, referred to above, this would therefore be in the blockaded zone. From Doggersbank Zuid, I steered: South true, which course I considered perfectly safe, seeing that a Dutch steamer loaded with timber was steering several degrees to the westward of our own course, and, that to the westward of the light vessel, several crafts were engaged in fishing. I also took soundings from 7 p. m. (25 fathoms), etc. . . . At 11:30 p. m., I saw fishermen and a lightvessel exhibiting the characteristic flashes of Terschelling Bank lightvessel. To make sure that it was Terschelling Bank lightvessel, I hove to the lead, found 12 fathoms, and signaled by flashing lamp, inquiring for her name; the lightvessel confirmed to be Terschelling Bank lightvessel, and thus I assumed my position to be: latitude: 53° 28' North; longitude: 4° 52' East of Greenwich. This was more in accordance with the longitude by chronometer. I came to the conclusion that Doggersbank Zuid lightvessel had made a mistake when signalling her longitude.

"At Terschelling Bank lightvessel I altered course to South 38° West true, to make Haaks lightvessel, kept heaving the lead, and found 12-13 fathoms, which confirmed my belief to be steering for Haaks lightvessel. At 5 a. m., on the 4th of April, not seeing Haaks lightvessel, and having run 35 miles on a true course S 38° W, (namely: 40 miles by log, minus 5 miles allowance against current), I altered course to: South true (I then took for granted that the said lightvessel was either taken away or extinguished), and kept on soundings, which confirmed me to be steering the proper course, at a safe distance from the shore. At 7:40 a. m., the second officer, when heaving the lead, found 10 fathoms, and reported fishermen in the S. E., 4 to 5 miles. Until 8:30 a. m., we had had overcast sky, snow squalls and horizon not clear; at 8:40, I had run 31 miles: South true, (namely: 27 miles by log, plus 4 miles current allowance with us), the weather clearing up a little, and not seeing the shore, I decided to alter course to the eastward, and steered: South 12° East true, until 9:30 a. m., when I had run about 7 additional miles.

"At 9:30 a. m., we sighted a submarine in a S. S. W. direction, saw an explosion, and heard a shot, on the starboard bow. I stopped at once, hoisted the Ensign, the answering Pennant, and waited for the submarine to come alongside, but she failed to do so, and disappeared as soon as she had fired. (N. B.: All markings of the Commission for Relief were flying.) At 9:47 I had decided to proceed on my voyage, being under the impression that the submarine was satisfied with seeing the ship's name and the Relief flags and marks, and did not want to come alongside to examine the papers, when the second mate sighted the periscope astern, and I thought that the submarine was coming alongside after all; although we were waiting, she did not seem to come any closer, and the periscope disappeared again; so that I understood that the submarine had gone for good.

"We therefore put under way, but a couple of minutes later (the vessel had no headway yet, and was slowly coming up to her course), the periscope was sighted again astern. We stopped the engines immediately; the submarine raised to the surface (we distinctly saw her turret) and, without previous warning, started shelling the vessel. It was about 10:07 a. m., and the submarine was at such a distance that we could not distinguish her people.

"We decided to take to the boats, which were swung out, although we gave several prolonged blasts on the steam whistle, while lowering the boats, she kept on firing, hitting the ship in various places. A shell exploded on the bridge, wounding the Chief Officer Lagasse and myself, and compelled us to leave the bridge. Donkeyman Aubries was hit by another shell, which exploded near the funnel, and he fell unconscious on deck, apparently killed; he came to a little later, and was helped in the port boat. Chief Engineer Dierckx, Second Engineer Pehlsten, Third Engineer Redeker, Stoker McNeal, Steward Gruyter were all wounded by a shell while lowering the starboard boat.

"The boats were afloat and the vessel abandoned at about 10:20 a.m. The last shots were fired on when we were in the boats. It is my opinion that they fired at least fifteen shots. One of the last shots carried the steam whistle pipe away, and steam escaped therefrom until a little later, when the submarine fired a torpedo, which struck the vessel amidships, on the starboard side;—we saw water and debris raising in a column higher than the funnel.

"When into the boats, we mustered, and found everybody present: 24 men, of which 8 wounded. We saw the periscope close by for some time afterwards, and finally it disappeared totally.

"In the boats, steered an E. S. E. (magn.) course from about 11:15 a.m. until 3:20 p.m., in which time we covered a distance of about 12 miles at the most. Then, we made for two fishing smacks, lying about one and one-half miles in a NNE (magn.) direction. Their position, according to their skipper, was: WSW (magn.), about 19 to 20 miles from Ymuiden—and about 9 miles off Scheveningen.

"With reference to these smacks' position, and the distance covered with our boats, 'Trevier's' position, when attacked, was: latitude 52° 15' North; longitude 3° 49' East of Greenwich, thus 18 to 19 miles from the shore.

"We received first aid from the skippers, Van Duivenboot of 177 K W, and Jacob Van den Plas of 73 K W, and then immediately sailed for Ymuiden. Through the light airs and calm, we only arrived off Ymuiden about 2 a.m. on the 5th of April, and were towed into port and taken to the Red Cross Ambulance between 3 and 4 a.m.

Signed:

O. LEMAITRE,

Capitaine.

CHARTERING OF VESSELS

The chartering of tonnage was for the most part handled through the London office of the Commission. Not too much emphasis can be placed on the invaluable advice and concessions of commercial firms, banks, and transportation companies as making the organization and operation of this branch of the service possible. In the first months of the relief no difficulty arose, as tonnage was readily available and was obtained in the usual peace-time way through any of the world's shipping exchanges, of which the Baltic in London was the most active. Owners had some hesitancy in entering the lanes required, but after a few voyages there was little difficulty in this regard, as these were open-market charters and rates had advanced, ensuring gains far in excess of pre-war earnings. At this time the Allied Governments did not fully visualize the importance of shipping in the conduct of the war, and, except for government requisitions as needed, there was no control and shipowners fixed rates as high as the market would bear.

During the first few years, the Commission insured all voyages according to commercial practice, marine risks being placed with Lloyd's and with New York underwriters. Regarding war risk, the Commission was permitted to cover this through the British War Risk Bureau, a scheme which this government had instituted in the early days of the war to encourage sea traffic. In February, 1917, the Commission set up an insurance reserve and thereafter carried its own insurance. Insurance rates, as with freights, rose precipitately as losses in world-shipping movements multiplied, and an analysis of actual voyage costs indicates this very clearly. The combined transportation costs of the Commission in 1915 averaged about 17% of the total delivered cost of foodstuffs, whereas in 1918 this had risen to nearly 50% of the total cost.

As the work continued the Commission gradually secured under its continuous charter a fleet of Belgian vessels, some twenty-three in number and of 117,350 d. w. tonnage, requisitioned for this service. This basic fleet was quite inadequate and was supplemented by chartering expensive neutral tonnage. An understanding of the size of the fleet in continuous service required to deliver the program may be derived from the following calculation:

Typical foodstuff program per month (net).....	110,000	metric tons
Tare on bacon, lard, and meat.....	3,000	" "
Total weight (gross).....	113,000	" "
Lost space on cased, barreled, and bagged goods.....	3,000	" "
Total monthly cargo requirements.....	116,000	" "
Approximately 15% must be added to determine ships d.w. tonnage requirement ..	17,400	" "
Total monthly d.w. tonnage required.....	133,400	" "
The average complete voyage (in 1918) required 66 days, or 2 1/6 months, and multiplying by this factor, the required continuously operating fleet becomes in d.w. tons.	289,000	metric tons

This represents 58 steamers of 5,000 tons d.w., and thus after making allowance for the permanent Belgian fleet of say 110,000 tons d.w. (losses and vessels refitting brought the Belgian tonnage down) the Commission was in the open market continuously for some 179,000 tons d.w. of extremely expensive American and neutral ships in order to fulfil a minimum program. The Belgian and other steamers secured were generally small, and the actual fleet in the continuous service of the Commission for long periods numbered 70 vessels.

Though the cost of securing sufficient tonnage was always a source of anxiety to the Commission it was not until 1916 that the actual world's shortage of tonnage made itself felt. Submarines, mines, and raiders had been continuously active, and even in 1916 new construction had been far outpaced by losses. There was no Allied shipping control at this time except by requisition for the armies and navies; but this absorbed more and more tonnage, to the depletion of that available for carrying provision for civil populations. Allied requisitions affected the Commission indirectly, in that services from which requisitions were made were necessarily replaced from neutral tonnage previously available to the Commission.

In December, 1916, the Germans announced to the world their proposed policy of unrestricted submarine warfare, and this was put into operation February 1, 1917. The situation was immediately and dramatically altered by the new form of warfare. As far as the Allies were concerned, their whole war effort was soon threatened with disaster; and all the main European Allies were in imminent danger of starvation. It may be of some interest to quote a few figures comparing sinkings previous to unrestricted submarine warfare and subsequent to it. For British ocean-going ships alone the average monthly losses in 1916 were 24. In the first six months of 1917 the average monthly losses rose to 80, and when the campaign was in full force 78 British ships were lost in a single fortnight.

The immediate effect on the Commission was the withdrawal of neutral shipping from the seas. This took place directly following the German announcement of unrestricted submarine warfare in December, 1916, and left the Commission with nothing but the Belgian vessels.

Even these were moved with caution and only after new guarantees were forthcoming from the Germans. New undertakings required time to arrange and in February and March of 1917 the Commission was forced for safety to discharge 13 steamers carrying 56,621 tons of relief cargo in English ports. Pending further assurances of shipping immunity from the Germans, this was done not only to save the cargoes which were subject to rapid deterioration on shipboard but also to turn the ships around for America and new cargoes.

At the same time cross-channel service from United Kingdom and French ports to Rotterdam was of necessity suspended, and only after great delay was it reinstated and then in a very limited amount. It was impossible to anticipate this. As a result both the overseas cargoes unloaded above and the huge stocks and contracts held by the Commission in England and France were finally sold by Government orders. In this way 95,096 tons of provisions were lost to relief. Reference is here made to page 11 (Part II) where the detail of this transaction is shown. Incidentally, the Commission realized a considerable profit on the disposal of these goods, and this, though it naturally was no mitigation of the immediate distress in Belgium and France, was of some satisfaction.

During all of 1917 and part of 1918 the great problem of the Commission was that of shipping. Appeals were made to the Allied Governments, which had finally instituted a complete Shipping Control. The United States entered the war April 6, 1917. Supreme efforts by the Commission during all of 1917 resulted only in the acquiring of a few Swedish and American charters. The direct American contribution to the war in the form of the army and supplies to maintain it, entailed an even greater strain on shipping, and the Commission was informed that American ships in its service must be withdrawn. Later in 1917, Allied Governments exercised practically complete control of neutral shipping, and there was no longer the neutral tonnage in the free market for the Commission to obtain.

The Commission's repeated appeals were finally heard, and on December 5, 1917, at an Inter-Allied Conference in Paris, the shipping requirements of the Commission were placed on the priority list, but it was not until four months later, on April 25, 1918, that the Allied Maritime Council was directed to take the necessary steps to find the required supplementary tonnage for the Commission.

The effect of the shortage of shipping during all of 1917 is represented by the diminution in shipments to Belgium and Northern France. The pooled efforts of the Allies, supplemented by shipbuilding and the success of the convoy system, gradually defeated the submarine menace, and during the latter part of 1918 the Commission was able more nearly to realize its program; but had the war continued, the winter of 1918-19 would still have been a difficult one.

The Commission realized from the outset that its fleet of ocean carriers was the primary factor leading to success or failure of the relief operations. As a side light on the history of these difficult times, it is interesting to note the various attempts made by the Commission to secure vessels for its service. During the first months of 1915, negotiations were started with the object of chartering over 20 German ships then tied up since the outbreak of the war in neutral ports—mainly American and South American. The scheme involved turning the ships over to a neutral flag to be operated by a neutral shipping firm for the Commission. After extended discussion the Commission actually secured the consent of the Allied Governments, and agreements were made with a Dutch firm to operate the vessels. Despite the humanitarian features of

[illegible]

the plan, the German Government was reluctant to throw this additional tonnage into a service toward which it knew the Allies, in an emergency, would make contributions out of their depleted availabilities. Berlin refused its consent in July, 1916.

Again, in 1917, the Commission endeavored to relieve its shipping troubles by an outright purchase of vessels. One plan considered the purchase of eleven ships of the American Transatlantic S. S. Co.,—the so-called Wagner fleet. These vessels were "blacklisted" by the Allies, for the reason that though they were of American registry, they were suspected of being German-owned, as their transfer to the American flag was effected shortly after war was declared. The total cost of such a purchase meant an outlay of nearly \$20,000,000, but the Commission was prepared to proceed. Unfortunately several of the vessels were already in British and French prize courts, and the necessary complicated diplomatic negotiations were further obstructed by legal delays, with the result that nothing came of the plan. A further scheme of outright purchase of several American-built vessels reached a point where contracts were actually signed by the Commission. These contracts were finally cancelled, and all plans of purchase were dropped when it became known in May, 1917, that the Allied and American governments proposed to requisition all steamers and "pool" their shipping resources. From this time onward the Commission's efforts were extended toward drawing its required allotment of tonnage from the "pool."

Coincident with these unsuccessful efforts to secure additional vessels, pressure was often applied to the Commission by the various governments to take vessels off the relief service to meet military demands. And it was only by appeals to the highest quarters that the Commission maintained its fleet at all. Not too much stress can be laid on the efficiency with which the relief vessels were operated. Complete coöperation between the division of purchasing and that of shipping resulted in cargoes being ready for loading as soon as the vessel arrived in port; and in line with this, as will be mentioned later, the excellent discharging arrangements at the port of Rotterdam contributed largely toward expediting the "turn around."

There is reproduced on the opposite page a reduction of one of the "Shipping Control" sheets issued twice each week by the London office of the Commission. These were forwarded immediately to Rotterdam and Brussels, and served to check cable advice concerning all vessels and their cargoes moving for the Commission.

ARRIVALS

During the entire period of operation 993 full overseas relief cargoes and 1,320 cross channel cargoes arrived at the Commission's transshipment ports for Belgium and Northern France. The summary of these arrivals is shown on page 15 (Part II) and in further detail on pages 33-150, where every vessel, together with its contents and value, is listed. The following abbreviated table presents the accomplishment year by year:

	Relief arrivals at transshipment ports			
	Loaded voyages		Net cargo (Metric tons)	Total cost
	Overseas	Cross- channel		
First Year	150	344	983,808	\$ 68,924,221.33
Second Year	240	485	1,300,322	116,055,602.14
Third Year	144	226	724,175	115,297,779.88
Fourth Year	223	128	1,091,178	224,781,218.88
Fifth Year	236	137	1,074,948	261,150,491.22
Totals.....	993	1,320	5,174,431	\$806,209,313.45

STEAMER LOSSES

During the four years and ten months of operations, Commission vessels to the number of 52 met with accidents of various characters. In a marine transportation operation of this magnitude losses were bound to occur even in normal times, and the added danger of floating mines and marine risks due to the necessity of following unusual lanes greatly increased the chances of accident. Accidents due to floating mines may as well have been caused by Allied as by German mines, whereas torpedoed ships and vessels fired on are to be accounted wholly against the Germans. The Commission vigorously protested every incident of this character, through the American Ambassadors in London and Berlin and later through the Spanish Ambassador. Unquestionably some accidents occurred through the failure of shipmasters to follow closely the courses and restrictions laid down by the Germans, and several relief ships were sunk entirely off their prescribed courses and within announced danger zones, some barbarously, to be sure. Whenever the Germans admitted themselves definitely in the wrong in the circumstances they made good by replacing the cargo or paying for the damage. The following is a list of steamer and cargo losses from all causes.

RELIEF STEAMERS AND CARGOES LOST AND DAMAGED

Steamer	Date	Cargo	Character of accident
1915			
"S.S. Harpalyce"	Apr. 10	In ballast	Sunk by torpedo in North Sea
"S.S. Ashmore"	Sept. 12	1,348 tons Malze	Sunk by mine in North Sea. Total loss
"S.S. Ulriken"	Nov. 17	3,077 tons Wheat	Sunk by mine or torpedo. Total loss
"S.S. Althamas"	Nov. 18	6,134 tons Wheat	Damaged by mine in North Sea. Partial loss
"S.S. Levenpool"	Dec. 17	6,513 tons General	Damaged by mine in North Sea. Partial loss
"S.S. Ellewoutsdijk"	Dec. 30	In ballast	Sunk by mine in North Sea
1916

SUMMARY OF ACCIDENTS

Vessels torpedoed	17
" mined	14
" torpedoed or mined.....	3
" fired on by submarine.....	3
Collisions and miscellaneous accidents.....	15
Total accidents.....	52
Vessels lost	38
Vessels or cargo damaged.....	14
Cargo lost	114,000 tons

By far the greater number of accidents occurred after 1916, when announced danger zones, both German and Allied, restricted the free lanes, and German submarines were particularly active. It may be noted that the Relief steamer, "Pontoporous," collided with the S. S. "Sussex" and perhaps, had the collision been more complete, there would have been no "Sussex Incident" for historians to record. The relief steamer, "Imo," acquired an unsavory prominence. This vessel had the misfortune to play the leading part in the Halifax explosion in December, 1917. Possibly the relief steamer "Storstadt" in plowing its way through the danger zone off the Irish coast received just retribution in the shape of a German torpedo for its large contribution toward the sinking of the "Empress of Ireland" in the St. Lawrence some years before. The relief steamer "Fridland" was not satisfied with one sinking. It was sunk by colliding with a mine in May, 1916, and its cargo of 7,366 tons of wheat was lost. The vessel was raised, repaired, and put into service again, making two successful trips for the Commission. The fourth attempt was disastrous. The "Fridland" was again sunk by torpedo off Terschelling Light on February 7, 1918, with 6,618 tons of wheat. The annals of the merchant marine during this period record many occurrences of this character where vessels were torpedoed and repaired and torpedoed again. To "disappear in the Atlantic" is not a frequent occurrence these radio days, yet the relief steamers "Keltier" and "Syrie" met this fate. Small boats, these were, which normally would have been shifted on the Argentine run for the winter, but in a time of ship shortage such long voyages were prohibited.

V. INITIAL DISTRIBUTION

Initial distribution of the relief supplies may be divided into two phases, namely: (a) reception of relief cargoes at port, and (b) movement to the final distributing centers throughout the relief area. An examination of the map following page 81, which indicates transportation lines, will illustrate the extremely favorable layout for serving the occupied territories, consisting of a first-class deep-water port with short hauls

Relief "S.S. Grangesberg," showing C.R.B. grain elevators 9, 11, and 12 discharging into lighters for Belgium. Additional relief cargoes in the background

Relief "S.S. Alland" with her cargo of wheat practically discharged

through a network of waterways and railroads to every point. However, the fact must not be lost sight of that all relief supplies had to pass through the barrier of belligerents at war, and the entire operation was within sound of the battle fronts.

PORT OPERATIONS

Rotterdam, in neutral Holland, with its excellent harbor, modern handling and warehouse facilities, and direct canal connection with Belgium and Northern France, was organized as the Commission's principal transshipment port and operated as such

Relief "S.S. Gothland," showing C.R.B. grain elevators 11 and 12 alongside

Relief steamers "Imo," "Trevier," and "Fruithandel"

until after the Armistice. The Belgian port of Antwerp which in normal times compares equally with Rotterdam in facilities was, during the war, a de facto German city and therefore unavailable. After the Armistice, Antwerp, assisted for a short time by the French port of Dunkirk, took over the burden of port work.

Rotterdam was the funnel through which relief shipments from all over the world flowed. The Commission's Rotterdam office was first and foremost a shipping office, but, as it was the nearest neutral point to the front line of relief, it served also as a channel for all communication from the outside and its diplomatic functions were important. Not too much can be said of the sympathetic support of the Commission in advice and concessions by the Dutch Government. In times of great shortage the Commission was able to borrow large quantities of wheat from Dutch Government stocks. The situation of Holland was an extremely difficult one throughout the war and the Dutch people were often on extremely restricted rations. During a particularly trying period the Commission was able to serve Holland by making her a loan in turn from an unusual and temporary surplus of its grain stocks. It was inevitable, in a port operation depending so largely on labor, that the Commission should meet difficulties of strikes among the stevedores. At such times the Dutch Government assistance was invaluable, and the transshipment of supplies was rarely delayed. Private Dutch firms contributed warehouse space, tugs, and other services, in addition to loaning shipping experts to the Commission.

To keep a procession of relief supplies moving demanded an organization sufficiently large to handle cargoes of twenty to thirty deep-water ships each month. The management of grain elevators and other discharging equipment, renting of warehouses, and chartering of lighters and tugs was complicated by the diplomatic difficulties attending negotiations concerning clearance papers and passes. As has been stated, there were 2,313 cargo arrivals during the relief operation. By accident or intention, cargoes often reached port in groups—this was particularly true in the later days when the Allied convoy system was in vogue. The result was that there were often five to fifteen overseas arrivals in port at one time. The accompanying pictures give some idea of harbor activities at Rotterdam.

There was no relaxation of usual business methods in port operations. On the arrival of an overseas carrier, lighters were immediately brought alongside, and discharge commenced under the supervision of Dutch Customs and Commission inspectors. Grain elevators automatically weighed the outturn of bulk cargoes, whereas general bag and case cargo was weighed on balance scales and slung overside, all under supervision and careful checking. While the average time for discharging general cargoes was from two to five days and for bulk cargoes two days, the Commission shattered all records of the port in the rapid discharge of vessels. The following are times of discharge of several relief cargoes:

Arrival 551 "S.S. Crios"	September 21, 1915	6,480 tons wheat	20 hours
Arrival 609 "S.S. Photina"	October 23, 1915	7,386 " "	17 "
Arrival 612 "S.S. Sagama River"	October 23, 1915	7,120 " "	17 "
Arrival 665 "S.S. Pontoporos"	November 15, 1915	4,946 " general	76 "
Arrival 751 "S.S. Andreas"	January 9, 1916	9,217 " wheat	28 "
Arrival 944 "S.S. Grangesberg"	April 17, 1916	9,641 " "	17 hours and 20 min.

An important function of the Rotterdam office was that of purchasing provisions in Holland for shipment to Belgium. Supplies consisting largely of vegetables, both

fresh and dried, milk, cheese, and butter, to the total of 144,654 metric tons, were secured in Holland.

The total tonnage of relief provisions handled by the various transshipment ports and Lille is shown by the following tabulation:

Rotterdam.....	November, 1914, to August, 1919.....	4,686,359	metric tons
Dunkirk.....	December, 1918, to April, 1919.....	15,826	“ “
Antwerp.....	January, 1919, to August, 1919.....	462,502	“ “
Lille.....	November, 1918, to May, 1919.....	9,744	“ “

Total Relief Supplies.....	5,174,431	metric tons

WATERWAY TRANSPORTATION

The extremely favorable position of Belgium in reference to transportation has been mentioned. Destruction during the invasion had, however, completely dislocated the system. The canals, in many places, had been destroyed, locks had been blown up, bridges dropped into canals, and ships and lighters sunk. In similar manner railroad bridges had been destroyed and track demolished or shifted for military needs. Most of the lighters and rolling stock remaining in the country were requisitioned by the Germans. It was not until December, 1914, that it was possible even to collect data on the system, and some main canals never came into service during the war. Order developed out of such chaos only by supreme effort.

Canal transportation in lighters was employed to great extent by the Commission in initial distribution. Some few distant centers were inaccessible, and to these rail shipments were necessary. In February, 1917, the canals froze, and for a short period railroads were of necessity exclusively employed. As is shown on the map following page 81, every province of Belgium, except sparsely settled Luxembourg, is traversed by a branch of the general waterway system. Three of the districts of Northern France are similarly served. Three main arteries lead from Holland into Belgium. The first, from Terneuzen and Sas Van Ghent to Ghent, was large enough to carry 1,200-ton lighters. At Ghent the contents of large barges were transhipped into others of 300 to 400 tons burden, and sent west to Ostend and Bruges, or south to Courtrai, Tournai, Lille, Valenciennes, and Mons. The second artery follows the Zeland waters, the River Scheldt to Antwerp, and thence canals to Brussels and Louvain. As the principal flour mills were located near Brussels and Louvain, a large part of the imported grain followed this route. The flour was reshipped by canal or rail to points in Brabant, Luxembourg, and Northern France. From Antwerp lighters were also despatched via Germonde and Ath to Mons and neighboring destinations. The third artery runs from Rotterdam via Dordrecht and Weert into Belgian Limbourg and thence to Liège and Namur. The chief centers of the occupied area could thus be provided with food directly from Rotterdam via the canals. The following are canal terminals reached from Rotterdam and distances thereto:

BELGIUM

Central terminals	Distances from Rotterdam	Central terminals	Distances from Rotterdam
Antwerp (Merxem).....	87 miles	Brée	92 miles
Ath	171 “	Bruges	119 “
Boom	115 “	Brussels	133 “

Douai	172 "	Tourcoing	156 "
Lille	150 "	Valenciennes	167 "
St. Quentin	221 "		

It will be remembered that the Allied Armies were driving the Germans back into Belgium in October, 1918. From day to day additional areas recovered their freedom; but at the same time, their lines of food supply were crossed and disrupted by two vast armies. During this period before the Armistice, the relief organization still had to maintain in some way the continuous flow of provisions and its main port of Rotterdam for a time was isolated by belligerent lines. Direct shipments of provisions from overseas to Ostend and Ghent were contemplated. A few emergency cargoes were actually discharged during this period at the French port of Dunkirk and provisions transhipped by rail to points in Northern France. Fortunately the Armistice was soon signed and the Commission's supplies at Rotterdam, after some interruption, became again available and the emergency use of Dunkirk was discontinued.

Immediately following the Armistice, the Commission set in operation its long contemplated plan of shifting its transshipment operations largely to Antwerp. The advantage of this move can be readily seen from the accompanying map. Its immediate effect was to reduce the length of haul averaging 146 miles from Rotterdam to terminals, to approximately 60 miles. Incidentally the Germans had used the warehouses and port equipment in Antwerp for military purposes, and at the time of the Armistice the port facilities were not only greatly disorganized but the quays were congested with miscellaneous equipment and great quantities of gravel, stone, and cement, apparently to be used for the construction of front line defence structures and gun emplacements. Furthermore, the approaches to Antwerp through the Scheldt, unused by deep water vessels for over four years, had to be swept clear of mines and the channel dredged and buoyed. It was not until January 20, 1919, that the first relief steamer could be safely ordered to this port.

RAILROADS

Great use was indeed made of the waterways system, yet the Commission found it necessary to use the railroads to a certain extent. The main lines from Holland were used for emergency shipments when the canals were frozen and to localities such as Liège, which was inaccessible by canal. Belgium's splendid network of both main and narrow-gauge lines came into constant use. The former were state-owned and were taken over immediately by the Germans. The narrow-gauge and tram lines were

relied upon to an ever-increasing extent in supplying regional warehouses from central warehouses. All the supplies for the Belgian province of Luxembourg and the French Districts of Longwy, Vervins, Charleville, and a large part of St. Quentin, were sent by rail from Brussels or other points in Belgium.

REGIONAL WAREHOUSES

The tabulation on pages 12-15 gives the provincial and central warehouses, operated by the Commission, and their locations are indicated on the map following page 81. At one time or another 240 of these were maintained. For many reasons it was found necessary to evacuate certain warehouses and stock others as the complete distribution system became organized. Some 200 warehouses throughout the area represents an average in operation at one time. These in turn served 4,731 communal stores.

LIGHTER AND TUG EQUIPMENT

The early work of chartering lighters and tugs fell to the Rotterdam office, which drew on Dutch and Belgian-owned equipment on a trip-charter basis. This system became increasingly difficult as both Dutch and Belgian skippers preferred remunerative hauls in Holland and in fact feared, even in spite of German guarantees secured by the Commission, that the Germans would requisition equipment after passing the frontier. Eventually, as the Commission and the Comité National became fully organized, the problem of supplying lighters and tugs was for the most part taken over by the interior organization. Despite difficulties placed in the way by the Germans, there was organized a Ship Owning Department, which created a system of time-charters and, in fact, bought numbers of tugs and lighters outright. Approximately 80% of requirements were gradually acquired in this way, namely, a fleet of 495 lighters and 36 tugs. Some notion of the magnitude of this fleet can be had by noting that if placed bow to stern in line, they would stretch to 11½ miles. The following picture shows a portion of the Commission's lighter fleet.

C.R.B. lighter fleet at Rotterdam

SHIPMENTS

For the most part the transshipment ports made shipments in accordance with orders from the Brussels office, which controlled initial and final distribution in the relief area. The Commission supplied provisions to Belgian and French refugees in Holland, and at Havre to a comparatively small extent; and this was done without reference to Brussels. The primary divisions of shipments for ports were between Belgium and Northern France, though these were actually further allocated to subsidiary regions in the provinces and districts throughout both these areas. A picture of the movement of relief stocks at ports, that is, port operations, is shown in summary (Part II) on pages 16 and 17 and in detail on pages 151 to 188. Shipments by themselves are shown in summary on pages 18 to 19 and in detail on pages 189 to 202.

The following is an abbreviated summary for the entire period of relief:

Port	Shipments of relief supplies (metric tons)			
	Belgium	Northern France	Other destinations	Total
Rotterdam	3,517,467	1,031,727	137,165	4,686,359
Antwerp	376,774	34,983	50,745	462,502
Dunkirk	—	15,826	—	15,826
Lille	700	9,044	—	9,744
Totals	3,894,941	1,091,580	187,910	5,174,431

Lighter loads, 400 to 1,200 ton capacity, to the number of 13,953, moved the relief supplies from Rotterdam and Antwerp. At the same time, 8,238 rail shipments comprising 29,516 truck loads were made from these ports and Dunkirk and Lille.

The above considers only relief supplies from overseas, yet the necessary internal movement of the native crops and local produce from production localities to centers of population entailed considerable lighter and rail movement. In addition, the transportation division, for a period, had to move to Holland some 20,000 tons of Belgian coal per month, which replaced a similar drain on stocks in that country by the Commission's overseas ships for bunkers. No small item was the movement of about 12,000 tons of coal per month from Belgian mines to the Commission's flour mills throughout Belgium.

INSURANCE

Despite the extraordinary conditions, the Commission pursued the policy of insuring its stocks to ultimate destination. Overseas insurance terminated at the end of ship's tackle at the transshipment port. From this point to the communal warehouses a blanket policy was effected, through Swiss and Danish companies mainly, covering all risks against which it was commercial practice to insure. The policy was for an unlimited amount, the only warranty being that the maximum cover allowed on each risk—that is, each lighter, shipment, or warehouse—was limited to \$100,000, any excess over this amount being separately insured. The complete accounting and statistical record of every movement of relief goods, maintained by the relief organization for purposes of control, carried this immense amount of insurance detail without greatly increasing the administrative burden. No great losses were experienced. Most claims related to pilfering and theft, and that this loss was not greater was extraordinary in view of the prevalent distress.

Costs

In any discussion of costs two important factors must be kept in mind. It was the Commission's primary object to move supplies to the famished population with minimum delay, and economy was certainly a secondary object. On the other hand, one management was handling an unprecedented quantity of provisions without profit. It practically held a monopoly of the field, and because of humanitarian aspects it was the recipient of invaluable services and concessions of every character. Holland and Belgium have always been known as countries of cheap labor. There was neither industrial life nor government production in Belgium, unlike all other countries. Wages remained more or less at the pre-war level. Under these conditions costs have little comparative value.

The total expense of discharge at port including transshipment, freight insurance, and overhead charges of every character from the arrival of overseas cargo to delivery at regional terminals rose from an average of \$.86 per metric ton at the end of the first year to \$1.17 per metric ton at the end of the fourth year. During the fifth year cargoes were delivered to the restored governments at port, and no complete figure for comparison could be reached. Transport by water in Belgium cost a little over 4 mills per metric ton mile, which is 63 per cent less than pre-war cost of the same character of movement quoted as a little over 7 mills per metric ton mile. (See *Foreign Inquiry Report on Waterways*; Royal Commission on Waterways, 1909.) At any rate, these exceptionally low costs are interesting, accomplished, as they were, during a state of war and despite hindrances of the German Government.

VI. ULTIMATE DISTRIBUTION

The stream of relief supplies on crossing the Holland-Belgian frontier was absorbed by the Commission's highly developed machinery of distribution. The Commission and the Comité National as central bodies exercised complete control, but the responsibility for detailed and equitable distribution lay with the Belgian and French committees, particularly with the communal committees. Relief supplies were delivered at central and regional warehouses, some 200 in number, and to flour mills taken over by the Commission. From these, allocations were made to communes of which there were 4,731, in each of which was established a communal store, presided over by the communal committee.

STATISTICAL CONTROL

Elaborate statistics of deliveries from warehouses in Belgium and Northern France were kept with a view to constant check against leakages. The Commission maintained running accounting and statistical controls of arrivals, shipments, and consumption throughout the entire system, so that the stock position throughout the entire operation was possible of analysis at any time. On the opposite page is reproduced a reduction of the "Relief Position" statement on May 10, 1918.

Reference has already been made to statistics of arrivals, port operations, and shipments accompanying this report. The chain of figures followed on from this point through each Belgian province and French district to ultimate consumption in the communes. Importations by the Commission and local produce were never sufficient for the people, and all supplies were therefore jealously guarded for their own consumption. This in itself was assurance that no relief supplies were consumed by the occupying military, yet the Commission insisted on the maintenance of these records as conclusive evidence that the provisions reached the people in entirety and to complete the story of the movement of relief supplies from country of origin to the consumer. Statistics of distribution are shown in summary (Part II) by Belgian provinces and French districts on pages 20-21 and 24-25, whereas the details of consumption in communes of Belgium and of Northern France are shown on pages 203 to 332 (Belgium) and 333 to 439 (Northern France).

RATIONING

Before the war ended, most of the nations directly affected, belligerents and neutrals alike, were forced to adopt some form of rationing, either prescribed or voluntary. Though conditions varied from those existing in the occupied territories each government as it established its method of control had the benefit of the experience of the relief organization as a guide. Their knowledge of European methods, particularly the Belgian experience, unquestionably was of great assistance to those responsible in shaping the policies of the United States Food Administration.

The rationing of bread was universal in both Belgium and Northern France. On the other hand, although other commodities also were rationed in Northern France, such rationing applied for the most part only to cities in Belgium. Since Belgian country districts were largely self-supporting in subsidiary foodstuffs, the imports of these were reserved for the centers of population where destitution was concentrated.

Bread rationing in Belgium and Northern France was simpler to arrange compared to other countries, owing primarily to limited sources of supply of bread grains. As has been indicated, the native crops were taken over and the only importations were those of the Commission—both sources under complete control. The policy of distribution was one of highly extended decentralization leading from the central committees through provincial and district, regional, and communal committees, and through communal stores or bread depots to the individual.

MILLING

The initial control of bread-rationing began with the flour mills. As a glance at the statistics of importations will show, the bulk of the Commission's imports of breadstuffs was in wheat and maize. These were shipped directly to various mills which had been taken over by the relief organization through the provincial committees. A technical milling department was established, which by uniform contracts with the millers and by numerous inspectors absolutely controlled the operations. The customary procedure of accepting milled flour and allowing the miller to hold the by-product as part payment was discarded. Wheat, flour, bran, screenings, and all by-products throughout the operation remained the property of the Commission; and no deliveries were made except on orders of the provincial committees or their designated representatives. Milling rates were fixed and the percentage of mixture of native flour and maize flour was controlled. The millers were paid according to the quantity of grain milled.

The milling-rate of wheat for the first year was 82 per cent, the second year, 82 per cent and 90 per cent, and during a large part of the third and fourth years, 97 per cent, owing to the very restricted supply of wheat from overseas. Much discussion took place as to the effect upon the population of bread produced by this high percentage of milling, but statistics did not definitely establish deleterious results. Wide differences of opinion, also, existed both in Belgium and abroad, as to the economics of importing wheat flour as distinguished from wheat. In certain sections milling facilities were not available, and therefore no objection was raised against importing white flour. On the other hand, certain sections were destitute of foodstuffs for cattle and preferred to receive wheat in order that they might have the by-product. The occupation given to Belgian mills and their workmen and the useful production of fodder were factors which had to be weighed. Maize mills at Louvain and Boom, operated by the Commission, milled 2,000 tons of maize flour per month and produced large quantities of hominy, cerealine, and oil cake. The maize flour was used for mixing with wheat flour to the extent of 10 to 12 per cent.

The milled flour was allocated according to requirements throughout the country, and shipments were made from the mills to the regional depots and to the communes on a pro rata basis. All the milling for Northern France was done in Belgium, and shipments of flour were made from the mills to Northern France.

BREAD DISTRIBUTION

Equal in importance to the control of milling was the control of baking. It was as essential that the quality of the bread be maintained at as high a standard as possible as it was to get just *rendement* of bread. The Commission set up a committee of panification, which gradually worked toward standardization of output.

The method of detailed distribution of breadstuffs varied in the different prov-

inces and districts. Originally, the communal committee issued the flour from its communal warehouse to accredited bakers, who were required to submit lists of customers for approval to the communal committee, which then issued supplies on a ration per capita of baker's customers. The per capita allowance of flour was usually at the rate of 250 grammes per customer, and from this amount the baker in turn normally produced 335 grammes of bread, a differential being made to the baker between the charge made to him for the flour and price at which he sold the bread sufficient to cover the necessary cost of his subsidiary constituents and of labor. A different system was proposed by the Commission and was adopted in several provinces and districts. Under this, the local committees delivered the flour to bakers under contract which provided that 1.35 kilos of good bread must be produced from 1 kilo of flour, weighing taking place at a specified time after baking. The bakers in this case delivered bread to an established depot in quantities sufficient to serve the surrounding inhabitants. In this way there was a better check on both quantity and quality.

Each individual or family was supplied with a bread card and to procure bread on the delivery days, usually every three days, these cards had to be produced. The following is a bread card which was in use in the Province of Hainaut in Belgium and is typical:

1) Les distributions de pain ont lieu dans les locaux déterminés par la commune et il est interdit de le vendre ailleurs. Chaque ménage devra retirer son pain dans le local de sa section.

2) Chaque local de distribution assure le service pour mille ménages. Ceux-ci sont répartis en deux séries (1^{re} série: lundi, mercredi, vendredi; 2^e série: mardi, jeudi, samedi). Le poids de chaque pain sera uniforme et doit représenter la ration d'une semaine. Donc, un ménage de six personnes, par exemple, pourrait recevoir deux pains mardi, deux pains jeudi, et deux pains samedi. En conséquence, le délégué communal doit barrer le jour de distribution autant de fois que de pains distribués.

3) Chaque ménage apportera autant que possible l'appoint exact du prix de ses pains.

4) Les boulangers sont tenus de livrer dans les locaux communaux les quantités de pain proportionnelles à la quantité de farine qu'ils ont reçue de la commune: 135 k. de pain minimum pour 100 k. brut de farine grise; 140 k. de pain minimum pour 100 kg. brut de farine blanche.

5) Toute carte contenant une fausse déclaration relativement à la composition du ménage pourra être retirée.

6) Pour l'obtention des farines la commune est tenue de produire au Comité régional les livres des locaux indiquant le relevé des ménages et le total exact des bouches.

7) Quand cette carte sert aussi pour les autres denrées, il faut barrer à l'encre rouge.

8) Tous les locaux d'une même commune doivent barrer, chaque jour, le même numéro.

Ration Card for Other Commodities

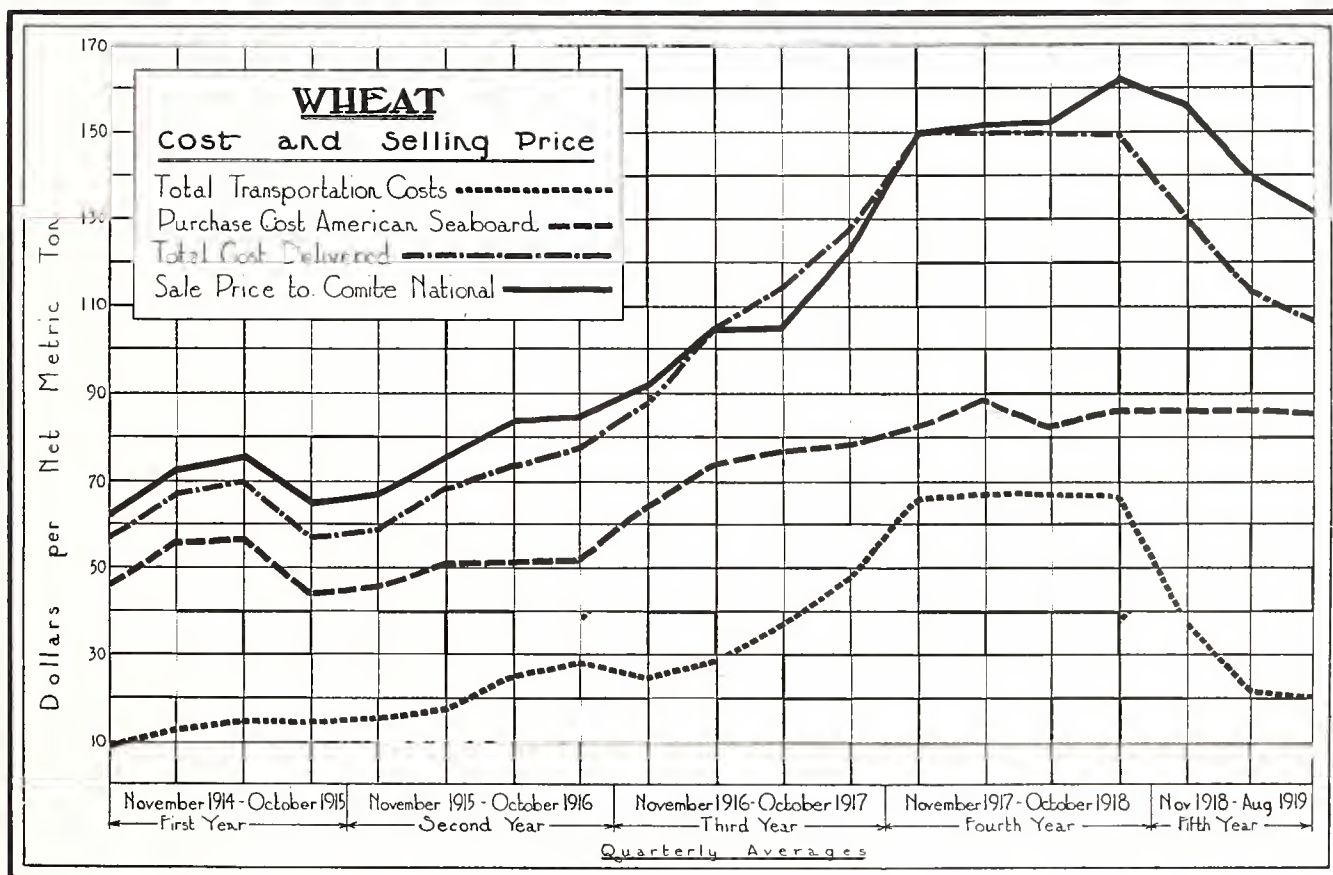

OTHER COMMODITIES

Whereas bread was distributed to the population on a two- or three-day ration, the other commodities were issued on a week ration. In Belgium these other commodities, such as rice, peas and beans, bacon and lard, were chiefly intended for the destitute and for the strata of society least able to pay the high prices prevailing for such native foodstuffs as were available. The control was as rigid as for flour and bread, in order that no one might receive more than his share. The distribution took place from communal warehouses and stores, and great care was devoted to their arrangement and efficiency, since the whole life of the people centered about them. A ration card as shown on the opposite page was furnished to each individual only after determination of his position and need.

PRICES

The prices at which imported and rationed foodstuffs were sold to the consumer varied directly with the cost to the Commission. There were three stages in the transaction: (a) cost price to the Commission, (b) selling price by the Commission to the Comité National, and (c) retail prices to the consumer. The margin between successive prices, as has been mentioned, was established to create a reserve against losses or deterioration and to build up a fund for benevolent expenditure. Prices in Belgium were not controlled in the sense of being subsidized—as, for instance, bread was in England—but were varied from time to time to meet changing cost condition, and thus the general trend of prices, necessarily followed that of world prices.

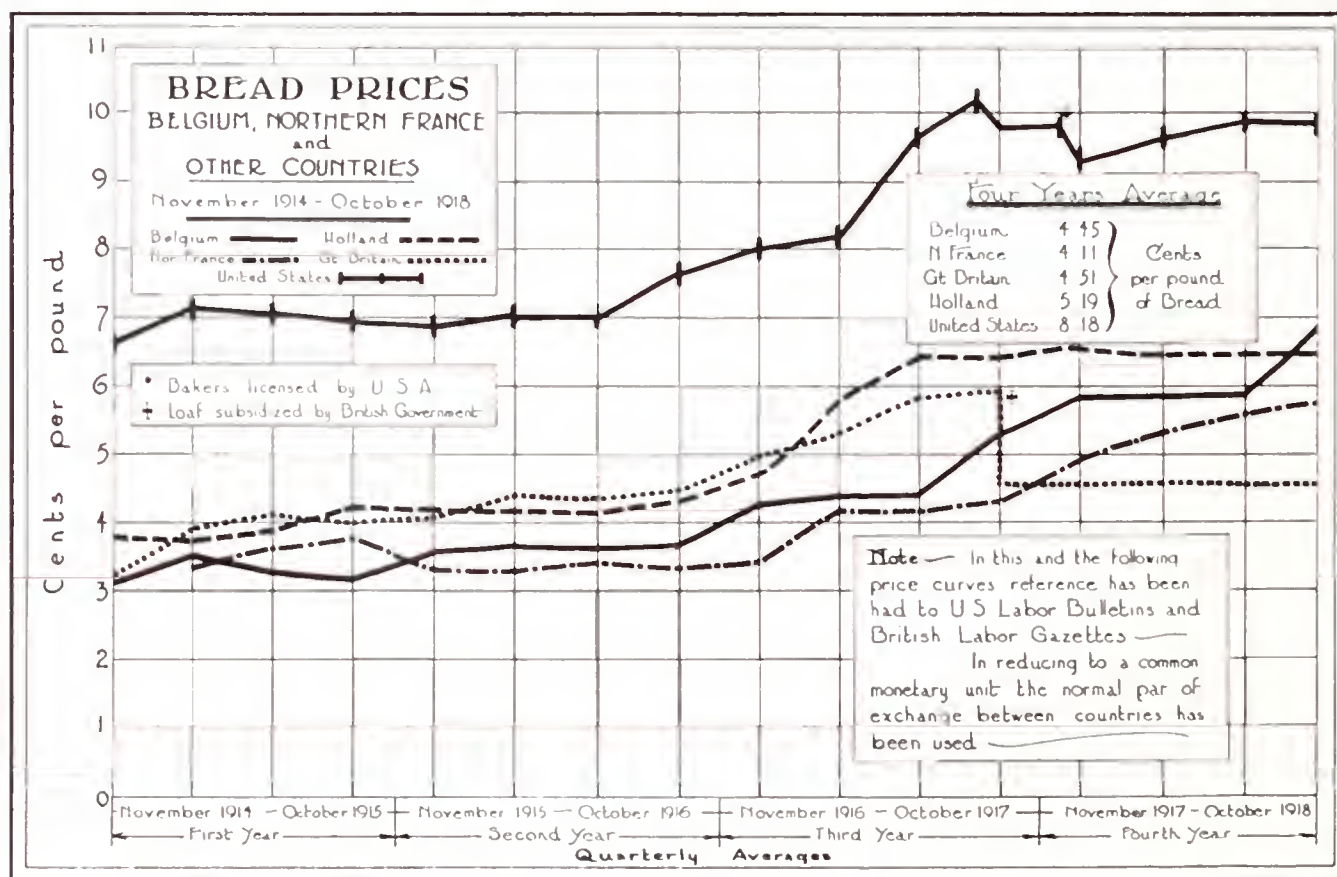

Bread grains formed the largest portion of the Commission's importation and the general trend of commodity costs throughout the relief period can be illustrated by

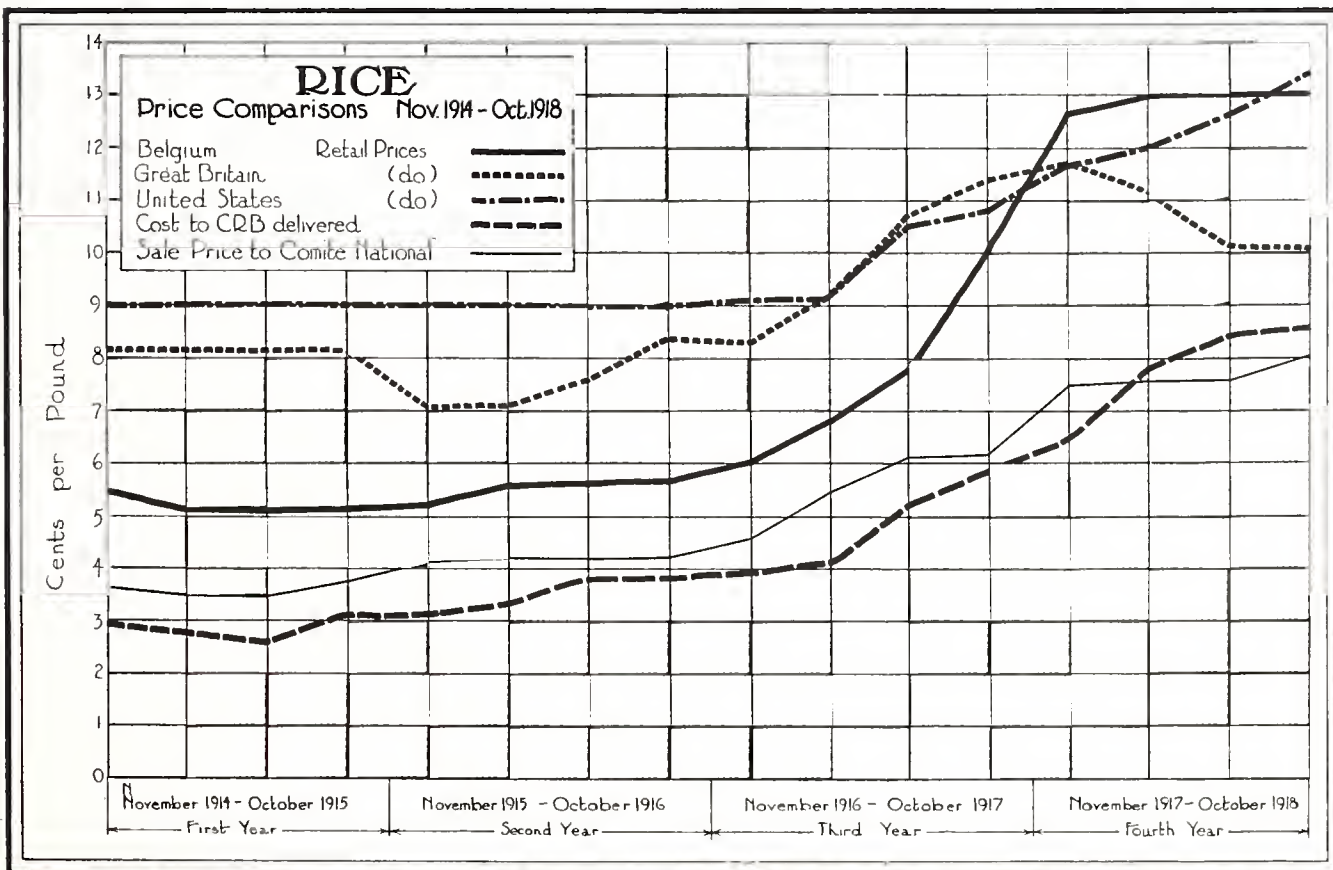

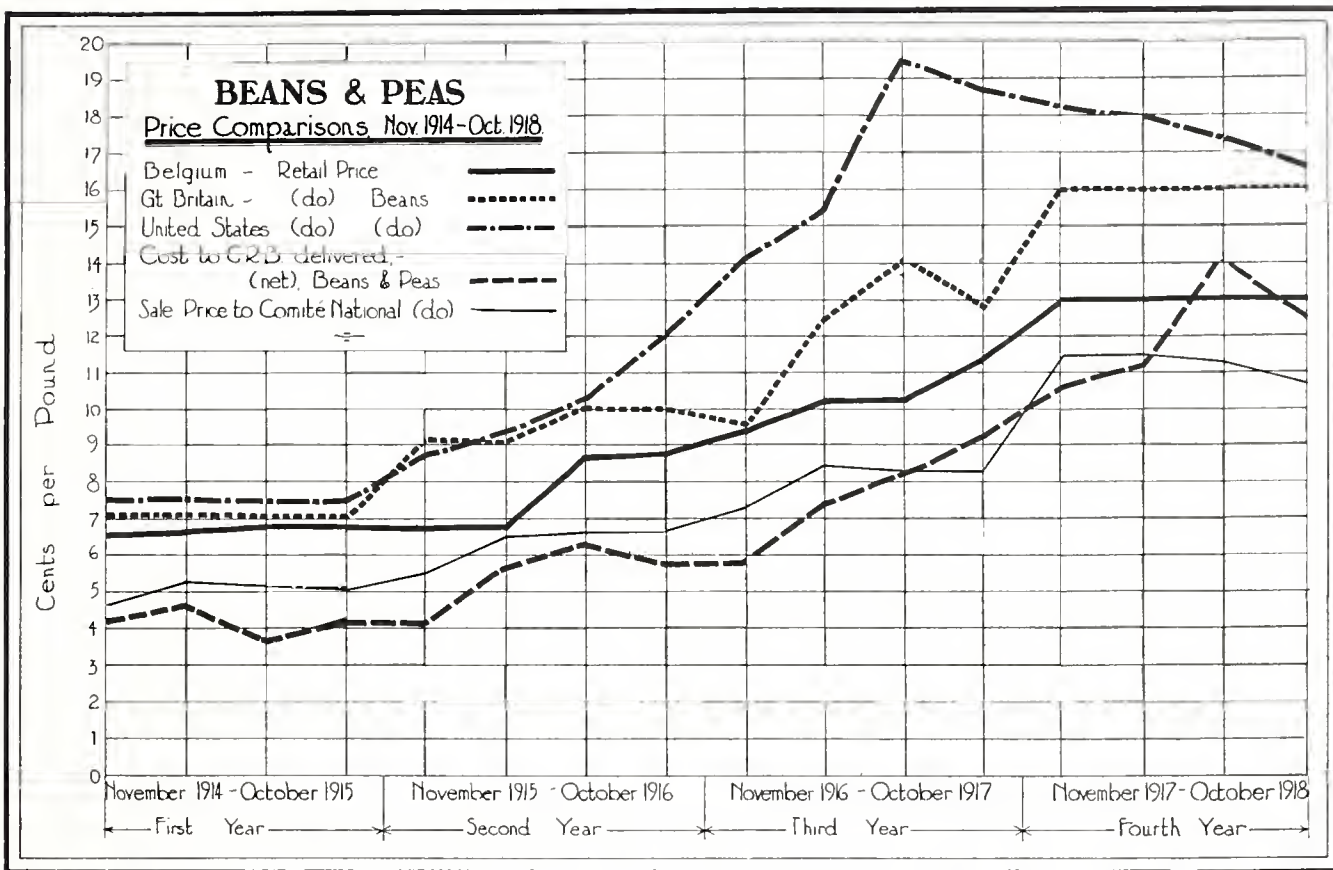

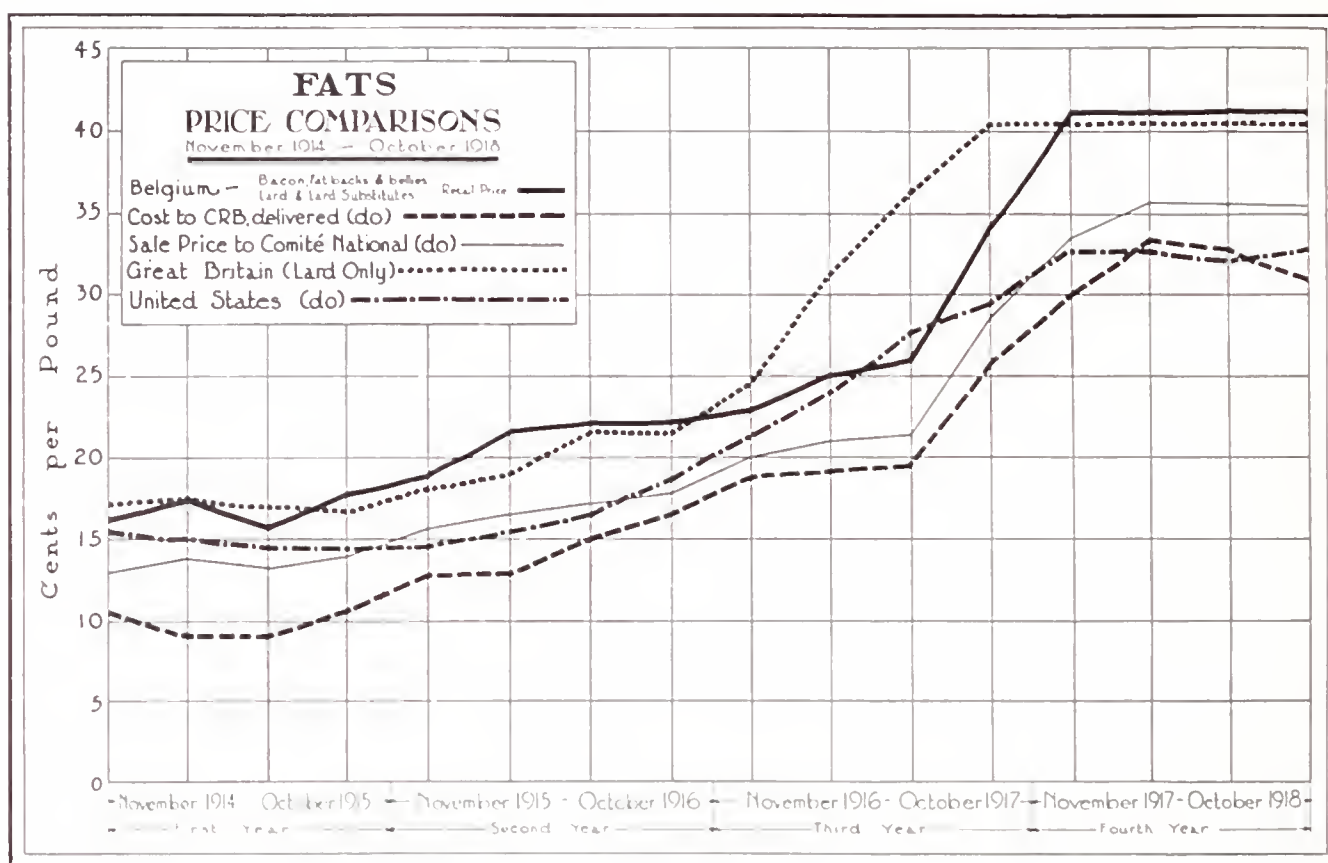

the cost curves for imported wheat. In the diagram on page 57 separate curves are shown for the cost of wheat at American seaboard and for oversea transportation charges. The latter rose from 17% of the total cost in the first year to 45% during the fourth year—i.e., in 1918 Atlantic freight and insurance charges closely approached the purchase value of the cargo. It will be noted that the sale price to the Comité National closely parallels the total cost to the Commission rising from a minimum of \$62 per metric ton in November, 1914, to a maximum of \$160 at the time of the Armistice. The drop in prices thereafter was due not to the fall in commodity prices—as American wheat was controlled—but to the precipitous decline in insurance rates and in freight charges.

RETAIL SELLING PRICES

The price of bread was fixed by periodic agreement according to the cost of ingredients. The cost of imported wheat and flour, of native flour and imported maize and rice, were all factors in the bread prices. As wheat became scarce milling rates were increased and considerable quantities of both maize and rice flour were mixed with the wheat flour producing a cheaper bread. The following bread-price curves show comparative prices between Belgium, Northern France, Great Britain, Holland and the United States during the war period. The loaf was generally cheaper in Northern France than in Belgium, owing to higher milling in the flour and a greater percentage of flour substitute in the form of maize flour resulting in a black but nourishing bread. In relation to Great Britain, Holland, and the United States, the comparison is distinctly in favor of Belgium and Northern France, except for Great Britain after September 17, 1917, when the government subsidized the loaf. Taken over the four years the Belgian paid less than 4½ cents per pound of bread, which was considerably the lowest average price of unsubsidized war-bread in the world.

Curves for other imported commodities indicate similar price advantages in Belgium. The preceding diagrams for beans, rice, and fats illustrate this. Imported fats included both bacon, lard and lard substitute, so that price comparisons are difficult; but that the price of fats, including more expensive bacon and hams, was low, is shown by comparison with the retail price of lard in Great Britain during the same period.

VII. FINANCE

BELGIUM

Soon after the inauguration of relief measures in Belgium, it became necessary to effect an entire separation in administration of the two categories of relief—of sales to those who could pay for their provisions and of the care of the destitute. Two departments—Provisioning and Benevolence—were, as stated before, maintained as entirely separate and distinct institutions, and throughout Belgium the two functions were carried out by entirely different subcommittees. In a general way, the whole of the foodstuffs imported by the Provisioning Department were sold to the population without distinction as to means. From these receipts either subsidies were given to the Benevolent Committees, with which the destitute were supplied with means to purchase, or imported supplies and native produce were secured for the soup kitchens and canteens, at which those in need secured food and clothing free or at nominal cost. In the sale of foodstuffs by the Provisioning Department, a margin was provided to cover the risks of exchange and destruction and to provide a source of income for the Benevolent Department. Such surplus or “profit” as was earned by the Provisioning Department amounted to a contribution from the well-to-do of the population to the support of the destitute. The financial operations of both departments were carried out through the Financial Relief and Exchange departments.

To understand the financial methods, one must bear in mind that purchases of foodstuffs abroad were necessarily made with gold, and that these foodstuffs when re-sold in Belgium were paid for in local paper currency issue, all metal money and gold-reserves having disappeared, and most of the pre-war currency having been supplanted by local banking issues which were obviously not convertible into gold. Moreover, the export of these notes to Allied countries, and in fact of any form of securities from Belgium, was prohibited by the German authorities. If there had been no economic or legal restrictions on exchange, the Provisioning Department, with a moderate working capital, would have revolved on itself. As it stood, however, it could only revolve insofar as the local currency could be interpreted into gold. With a view to solving this problem to some extent and to effecting other beneficial results, some slight relaxation of restrictions imposed by the belligerent governments was obtained, so that persons or institutions abroad who wished payments made in Belgium could hand to the Commission gold values abroad and the organization undertook to make payments of corresponding sums in Belgium. These payments were made in paper currency, received from the sale of foodstuffs at a fixed rate of exchange. There did not, therefore, pass over the frontier any actual money or securities of any kind, as the foodstuffs imported acted as the implement of exchange.

The financial operations of the Commission as a whole may be represented as follows:

Foodstuffs were acquired with gold abroad by:

- (a) Purchases with gift money, or gifts received in kind
- (b) Purchases with gold from commercial exchange out of Belgium as described above
- (c) Purchase with governmental subsidies.

The foodstuffs were sold in Belgium for local currency, and provided:

- (a) Subsidies to the Benevolent Committees and Benevolent Institutions
- (b) Liquidation of exchange described above
- (c) Advances to Savings and Loan Institutions, etc.

The expense of caring for the destitute was then partially covered by gifts from the public of money and food from abroad and partially by the surplus of the Provisioning Department. To meet the growing monthly deficiency, a fixed subsidy was granted each month by the Belgian Government, which during the later period provided the greater part of the Benevolent Department's requirements. The monthly subsidies supplied to the Commission were advanced as loans to the Belgian Government by the three great powers—the United States, Great Britain, and France.

In the early stages of the work, large amounts of actual foodstuffs were donated as gifts in kind to the Belgian people. It was quickly found that, owing to the enormous size of the problem and the physical circumstances of its solution, it was wholly impracticable to distribute these gifts in kind to the destitute. The gifts of food were of irregular character and irregular arrival, and any given canteen dependent on this source might be supplied with an ample amount of flour one week and the next week have to subsist on beans. Furthermore, the distribution of an actual gift cargo throughout thousands of different communes would involve a complete duplication of the system of transportation, alongside the distribution of foods provided for sale to those who had means to pay. In any event, these irregular gifts had to be supplemented by purchases, and innumerable difficulties arose over the inability to adjust gifts to actual and particular necessities. Furthermore, large quantities of the material given were, in the existing circumstances, of the order of luxuries and of varying food value. In the face of all these difficulties, the direct delivery of such gifts could only be accomplished either by a radical change of policy or by a very extended and costly administration. It was, therefore, determined that all gift food should be turned over to the Provisioning Department at its full value, and thus be added to the general stream. If such gifts reached the well-to-do, payment therefore automatically went to the Benevolent Department for the purchase of other articles. The price at which this gift food was taken over by the Provisioning Department was determined on the basis of the replacement value of such foodstuffs at the time they were given to the Commission. No deductions for administrative costs were made from any gifts, the entire expense of all benevolent administration being borne by the Provisioning Department.

NORTHERN FRANCE

The Commission undertook the provisioning of the population of Northern France in April, 1915, five months after the organization of relief work in Belgium. The economic demoralization was so great and the restriction of the occupying army so rigid that the administration of relief consisted solely in placing a ration adapted to local needs in the hands of every man, woman, and child. In the emergency all the population were considered as destitute, and rich and poor alike became dependent for the greater part on provisions imported by the Commission through the use of subsidies granted by the French Government. The Commission made no general appeal for charitable funds for the people of Northern France. Certain special funds were collected for the relief of special classes, mainly undernourished children, and the Commission distributed large quantities of gift clothing to relieve the distressing lack of textiles of all sorts in Northern France.

The whole of the foodstuffs imported was charged to the district committees at prices fixed by the Commission. The district committees, in turn, sold the foodstuffs to the communal committees at a small advance sufficient to cover the local cost of redistribution. The communes, in turn, resold the foodstuffs, without profit, to the population. At this point in the cycle an involved transaction was necessary, owing to the disappearance of all normal circulating media throughout the country as well as to the necessity of creating an automatic basis of payment by those who had property and at the same time provision for the destitute. To supply the deficiency in currency, each communal government printed its own notes of from 20 centimes up to 50 francs. This currency was put into circulation by the communes in:

- (a) Payment for communal services
- (b) Loans to individuals against property
- (c) Benevolence to the destitute.

Under the latter two classes sufficient advances were made to enable the population to live. The communal committees, in turn, accepted this local currency in payment for the ration of foodstuffs which the people ate daily. Thus the communal committees became possessed of local communal currency representing the value of the foodstuffs which they issued to the population. The committee then surrendered these notes to the communal authorities against an obligation of the commune to pay an equivalent sum after the war, and these obligations, together with guarantees by the individual members of the district committees, formed the basis upon which advances in gold were obtained abroad. In order to facilitate matters of accounting, the foodstuffs were debited by the Commission to the Belgian Comité National. The final liquidation of the pledged obligations of the communes, as well as the communal loans to individuals, both involving wide benevolent complexities, became a matter for after-war consideration of the French Government.

As stated above, the Commission fixed the price at which foodstuffs were debited to the district committees, at a rate slightly above the cost. A margin was thus secured by the Commission, which was devoted to three purposes:

- (a) Indemnification of local committees in cases of accidental destruction of warehouses or deterioration
- (b) Unforeseen losses in transportation
- (c) Reserve against fluctuations in exchange and food prices.

In the matter of reserve for exchange and food fluctuations, it will be readily appreciated that there were violent fluctuations in exchange between the French franc and the foreign markets in which the foodstuffs had to be procured with gold; and this, together with the fluctuations in prices of foodstuffs and costs of transportation, rendered it wholly impossible to charge the food to the district committee at actual cost from day to day. It was therefore determined that the whole operation could be greatly simplified by adjusting prices at round figures. As this reserve accumulated the Commission made rebates to the districts, and the sums involved were applied to benevolent purposes. At the termination of relief operations the balance of reserve was turned over to benevolence in Northern France in the same manner.

SOURCES OF FUNDS

The relief program of imports adopted in the very early days at prices then prevailing, involved an expenditure of over \$5,000,000 each month. As provision and transportation costs rose, this figure increased until during 1918 some \$30,000,000

monthly was required to finance the relief operation. From the very first moment the efforts of the Commission were directed toward finding resources with which to carry on, and it may be said that at no time during its operation could it look ahead without anxiety regarding the sufficiency of its funds. An historical treatment of this phase of the Commission's efforts makes a fascinating story which can only be touched upon here.

SUBSIDIES

It was obvious even at the beginning that such sums as were required could not be obtained from benevolent contributions alone. The financial problem was one of the principal subjects of discussion in the early organization meetings. The Belgian Government was of course disposed to do everything in its power toward financing the food supply of its people but was itself a refugee at Le Havre outside its country, cut off from its sources of revenue, and dependent upon subventions from the British and French governments for all its expenditures. It could not itself provide funds unless the Allies would first agree to advance the necessary sums. It is to be realized that the Allied governments themselves were at this time burdened with arranging their finances to meet their own war efforts. Negotiations were obstructed by the feeling that provisioning the Belgian people only went toward assisting them in paying to the Germans further requisitions and levies. The British Government was the banker for the Allies, and it was this government that had to be convinced. The British Government tolerated the relief work in the early days and permitted the food to go in, and gradually granted concessions. Step by step the Commission, by obtaining concessions and undertakings on the part of the Germans, gradually defeated suspicions and arguments.

The main object was to put the Commission on firmer financial basis by securing monthly subsidies. The Belgian Government had many obligations in the form of support to state institutions, interest on bonds, salaries to state officials and railway workers, pensions, etc., which it was unable to pay, as no exchange transactions were permitted. In the arrangement which was finally adopted, the Belgian Government advanced the subsidies to the Commission, the latter imported and sold provisions, and the obligations of the government were paid out of the realization on these sales.

It can be readily seen that though this scheme was merely in the nature of an exchange transaction, it had an indirect benevolent aspect. It not only enabled a large number of people to subsist without charity, but state institutions which had previously been a charge on the state exchequer continued to receive support—building and loan societies, savings banks, educational institutions, hospitals, agencies for war orphans, separation allowance bureaus, and communal benevolent societies caring for the insane, the infirm, orphans, etc., all benefited. Furthermore, the advent of subsidies into the financial scheme reduced the feeding of the better-to-do classes to a commercial proposition, affording an incidental profit applicable to benevolence.

When the Commission extended its work to Northern France, it did so only after negotiations with the French Government had culminated in subventions on their account for the support of this extension of the relief.

In November and December, 1914, prior to final agreement by the Allied governments to the policy of subventions, the Commission had received some £1,600,000 consisting of an advance of £600,000 from Belgian bankers from their resources in London and £1,000,000 from the Belgian Government. Beginning with January, 1915, a

monthly subsidy of fcs. 12,500,000 and £500,000 was advanced for the work in Belgium. In April, 1915, an added amount of fcs. 12,500,000 monthly was forthcoming to cover the work in Northern France. The Commission was very often in financial difficulties due to rising costs, and increases in monthly subsidies were granted from time to time.

Until June, 1917, all subsidies were advanced through the British and French treasuries. From June, 1917, to August, 1920, the United States Treasury made monthly subventions to the Commission in sufficient amount to cover the great bulk of expenditure, i.e., the cost of foodstuffs originating in America. Nevertheless, purely European expenditures, including freights on British vessels, were financed by credits set up by the British Treasury through British Government departments, mainly the Ministry of Shipping. It is thus seen that four governments—British, American, France, and Belgian—were involved in these complicated financial arrangements. Actually the British and American treasuries made their advances to the Commission in the form of loans to Belgium and France. For subsidies, therefore, the Commission was accountable to these two latter governments only.

Subsidies totaling \$700,540,443.38 were received by the Commission, representing 78.4 per cent of the total funds secured. The following tabulation presents an analysis of this source of funds:

Period	GOVERNMENT SUBSIDIES				Total equivalent dollars
	French francs	Sterling	Florins	Dollars	
"First Year"					
Nov., 1914–Oct., 1915.....	227,500,000	7,100,000	—	—	\$ 75,586,648.36
"Second Year"					
Nov., 1915–Oct., 1916.....	307,500,000	6,500,000	—	—	101,985,363.36
"Third Year"					
Nov., 1916–Oct., 1917.....	376,250,000	5,250,000	—	\$ 70,000,000.00	161,442,048.23
"Fourth Year"					
Nov., 1917–Oct., 1918.....	—	—	—	180,000,000.00	180,000,000.00

COMMERCIAL EXCHANGE

The acceptance by the Allied governments of the modified exchange principle in subsidies paved the way for the establishment by the Commission of another source of funds through commercial exchange. Permission was granted in December, 1914, for the Commission to make payments to individuals and families in Belgium upon receipt of similar amounts from relatives and friends outside the occupied territories. Again no actual cash passed the frontier, but payments were made from realizations on the sale of food. A great number of individuals receiving remittances in this manner were saved from destitution, and the effect was to lift some burden from the Benevolent Department. Well over 100,000 individual transactions of this nature were completed to a total of \$6,328,328.50, and though this sum represents only 0.7 per cent of the total funds secured by the Commission it was a useful supplement to its finances. Incidentally, since no communications with the outside world were permitted, this scheme was the only means by which relatives and friends abroad could assure themselves that their loved ones were alive. This assurance, of course, merely took the form of an official receipt from the Commission to the effect that the individual within Belgium had received the funds.

WORLD CHARITY

The first consideration of the Commission at the initiation of its work was to determine the methods by which the charity of the world could be mobilized on behalf of the Belgian people. At that time it seemed that the entire population would have to be supported by publicly subscribed charity. The gradual development of economic measures of exchange, loans, and government subsidies, already mentioned, made it possible at a later stage, however, to narrow the application of public subscriptions to food and clothing for the destitute. Though the charity was of a magnitude unheard of before, the prolongation of the war, the increasing destitution, and the natural and inevitable decrease in public support, rendered public charity inadequate to compass the whole problem of destitution. On the other hand, the subsidies themselves were insufficient to meet the entire problem of relief.

The methods pursued by the Commission in mobilizing the world's benevolence have already been spoken of. Solicitation was decentralized by the creation of local committees all over the world; the Press was called upon and coöperated willingly. Not only was first-hand information on conditions in Belgium supplied to the people of the world as an inspiration to help personally, but the whole maintenance of the relief was assured by the creation of public opinion. The Commission held rigidly to the desire that the neutrality of such publicity should be adhered to.

The collecting organization consisted of over 100 principal committees, with 4,000 subcommittees, engaged in providing support for the Commission's work. Such committees were established throughout the United States, Canada, the Argentine, Great Britain, India, Australasia, and Spain; and contributions were received from self-instituted local committees in Italy, China, and elsewhere. In April, 1915, the National Committee for Relief in Belgium was formed in England, under high patronage, to take over the stimulation and collection of donations for the work of the Commission from British Empire sources. Thus, these allied and associated appeal committees mobilized the charity of the world, supplementing the continual flow of benevolent support through the Commission's own organization and its branches.

World charity was directed to the support of the destitute through the Benevolent Department of the Commission. It consisted of donations in cash and of gifts in kind for general relief and of cash donations for the support of specific classes. Most important in this latter category was the care of the children, and from 1916 onward their relief was made the principal basis of charitable appeal, especially in the United States. For various reasons, specific classes suffering particular privation and worthy of support within the occupied territory were inaccessible under the general relief organization. Generous contributors, to whom appeal was made, took upon themselves this responsibility, and in this way special funds for the relief of specific institutions and classes were established. In this connection the Brussels Office Relief Fund, from which support was given to special local committees caring mainly for children, may be mentioned; and also the Forbes Fund from which cash was advanced to individuals in straitened circumstances.

World charity reached the magnificent total of \$52,290,835.51 or 5.8 per cent of the total funds secured by the Commission. An analysis of this total, which includes cash donations, donations for special funds, and gifts in kind, is shown below.

OPERATING SURPLUS

The major portion of the surplus of the Provisioning Department arose through the original sale of goods by the Commission to the central committees, i.e., the Comité National and the Comité Français. There became available for benevolence in addition, however, an amount of \$23,933,542.26 representing profits made inside Belgium by the Comité National on secondary sales to its subsidiaries, the provincial committees. These were the principal sources of operating surplus, but profits on incidental operations of the Commission outside the occupied territories supplemented the financing of the Benevolent Department to no small degree. Forced sales of cargoes in England and of stocks in London and Paris at the time of unrestricted submarine warfare in the spring of 1917 have been mentioned. Sales of goods to other destina-

tions, quite apart from Belgium, also contributed. In the final accounting the Provisioning Department found itself with over \$9,000,000 directly traceable to transactions having no direct relation to the relief of Belgium and Northern France, but which had been allocated to benevolence in these countries. The extent of these incidental profits was sufficient to absorb the complete cost of overhead and administration for the entire operation two and one-half times over.

Operation surplus and profits which were expended by the Commission in the care of the destitute amounted to \$135,637,543.21, constituting 15.1% of total funds secured, may be summarized as follows:

I. Operation Surplus of Provisioning Department	
Includes surplus on sales within Belgium and France and profits	
of the Commission outside the occupied territories	\$111,704,000.95
II. Profits earned inside Belgium	
Profits transferred to the Commission by the Comité National.....	23,933,542.26
Total.....	\$135,637,543.21

ACCOUNTS AND RECORDS

Funds secured from sources described above and disbursed by the Commission amounted to the stupendous sum of \$894,797,150.40. From the first moment of its existence the Commission realized its responsibility in the stewardship of this great enterprise. The actual record of accounting as well as auditing of every branch was, from the start, placed in the hands of an internationally known firm of accountants. Complete statistical records were maintained paralleling and expanding the accounting in all phases. Pages 1 to 13 (Part II) represent abbreviated statistical analyses of the accounts which have already been presented to the public in detail. On these few pages an attempt has been made to summarize in a few tables the mass of highly technical accounting records covering an extraordinary, involved enterprise. Practically all the currencies of the world entered into the financial accounting of the Commission. In order to simplify the bookkeeping the following exchange ratios were maintained during the active period of the Commission, realized differences being charged to an exchange account:

$$₯4.85 = £1 = \text{Fcs. } 25.40 = \text{Fls. } 12.03$$

VIII. BENEVOLENCE

The foregoing pages have described in some detail the operation of the Provisioning Department of the Commission. Operating as a business enterprise this department purchased and imported provisions for the entire population of occupied Belgium and France. These supplies were sold to the people. The Benevolent Department of the relief organization saw to it that the poor and destitute received their share, and this it did through the establishment of benevolent committees side by side with those of the Provisioning Department throughout the entire relief. Outside the occupied territories the Benevolent Department mobilized the charity of the world, whereas, within the countries, those requiring assistance were furnished with the means to purchase from the Provisioning Department or were supplied with the necessities of life through free canteens and soup kitchens. The magnitude of the benevolent side of the relief organization can be best understood when it is realized that of the grand total financial resources of the Commission amounting to \$894,797,150.40, there was expended in benevolence of one form or another the sum of \$615,237,147.47. The just distribution of this huge sum involved the determination of the state of need of each individual.

The methods employed by the Commission in administering benevolence differed in Belgium and in Northern France due to the radically different policies adopted in the two areas in meeting the general problem of relief. In Belgium, where conditions of destitution were not universally extreme, economic cycles were set in motion and through the product of these supplemented by the support of the charitable world, the destitute were cared for from day to day. No such self-help methods were applicable in Northern France. No general appeal for charity was made, and except for gifts of clothing and comparatively small special funds, the Commission made no charitable distribution. The entire population, rich and poor alike, were furnished with a definite ration supplied by the Commission through the use of subsidies granted to it by the French Government. In the emergency every individual was considered as destitute, and the liquidation of indebtedness, involving complex benevolent aspects, was postponed for after-war consideration by the French Government.

BENEVOLENT RESOURCES

The funds which were dispensed in the care of the destitute may be divided into two classes according to the sources from which they were derived:

- (a) the Benevolent Account of the Commission, and
- (b) State Aid.

The Benevolent Account of the Commission comprised all gifts of money and in kind collected through the Benevolent Department all over the world. Supplementing these came the subventions from the Provisioning Department derived from marginal charges on the sale of goods—actually representing contributions from the people themselves toward benevolence. The total sum so amassed, amounting to \$187,928,378.72, may be said to represent public support toward the care of the destitute, and it was this sum that formed the Benevolent Account of the Commission.

Under the classification of State Aid came expenditures derived from government subsidies. Against subsidies advanced to the Commission for purchases of supplies

abroad, the Provisioning Department made to the benevolent side, contra-payment of huge sums which were expended for benevolence and in financial and economic relief. The additional sum so expended amounted to \$427,308,768.75.

The total benevolent expenditure may be summarized as follows:

I. The Benevolent Account of the Commission	
Derived from public subscriptions and dispensed in charity.....	\$187,928,378.72
II. State Aid	
Derived from government subsidies and dispensed in charity, and financial and economic relief.....	427,308,768.75
Total Benevolent Expenditure.....	\$615,237,147.47

BENEVOLENT INSTITUTIONS IN NORMAL TIMES

In creating an organization to mitigate the increased distress it was the Commission's policy to support existing institutions and to erect new ones only when absolutely necessary. Unfortunately, the sharp political and religious division existing before the war prevented that coördination, centralization, and control of institutions essential to effectiveness and economy. In developing the war-emergency organization such centralization was imposed, and political and religious lines were temporarily erased.

In Belgium before the war there were four classes of institutions dealing with destitution:

- (1) State Institutions
- (2) Religious and Lay Foundations
- (3) "La Commission des Hospices"
- (4) "Les Bureaux de Bienfaisance."

The most important institutions directly under the state were the two great labor colonies at Merxplas and Hoogstraeten. The former was distinctly a penal colony, whereas the colony at Hoogstraeten was chiefly for old and infirm. Vagrancy in Belgium is a penal offence, and offenders are sent to one or other of these colonies.

A great number of religious and lay foundations existed in Belgium for various conditions arising out of indigence. These had independent incomes from property and public benevolence. Many of them undertook the care of orphans and the infirm, and some idea of their importance may be gained from the fact that there were six hundred such institutions engaged in the care of orphans alone.

"La Commission des Hospices" administered the established almshouses. They existed in some 330 communes and were distinctly communal institutions, supported by gifts or from the income of conferred property and by communal subventions.

"Les Bureaux de Bienfaisance" existed in every one of the 2,700 communes into which Belgium is divided, to care for those in need not reached by the other organizations. They were managed by committees appointed by the communal councils and were recipients of public support, and in many cases possessed property and incomes. Deficiencies in income were met from the exchequer of the commune concerned.

Prior to the war, destitution in France was handled by a number of public and private institutions similar in character to those in Belgium and quite as adequate; and it may be said that the numbers of individuals engaged in benevolent work in these countries was larger in proportion to the population than in other countries. These

charitable institutions and experienced personnel, together with the highly developed communal organization, supplied machinery for meeting the vastly more acute condition of destitution caused by the invasion.

PRINCIPAL CAUSES OF INCREASED DESTITUTION

The calamity of invasion and the paralysis of economic life rapidly increased the number of destitute from something like 5 per cent of the population normally to over 50 per cent. Three prime causes of increased destitution were set in action:

- (a) The dispersement of people due to destruction of their homes
- (b) The loss of breadwinners through death or through military mobilization
- (c) The paralysis of industry and consequent unemployment.

As a result of military activity, a great many dwellings were destroyed, especially in the smaller towns and villages; and the homeless either overcrowded the houses of their immediate vicinity or became refugees in the larger towns. The poorer members of this class became immediately dependent for food, clothing, and housing.

The Belgian authorities mobilized at one time or another probably 300,000 soldiers and a relatively larger number of men were drawn from Northern France for military purposes. Many civilians were killed during the invasion. Flight and other causes resulted in the loss of able-bodied men and breadwinners from the occupied areas; and there remained, especially in Northern France, a large preponderance of women.

The chief cause of destitution, however, was industrial paralysis. Belgium, before the war, supported its dense population, for it was the most highly industrialized area in the world. Over one-half of the pre-war population of the occupied section of France was concentrated in the intensely developed industrial neighborhood of Lille and Valenciennes. Directly or indirectly, by far the greater portion of the population was in normal times, dependent on the conversion of raw material into manufacture for export. The stagnation of industry induced by military occupation and the rigid blockade, caused the total cessation of manufacturing dependent upon imports and exports. Furthermore, the manufactures for home consumption were diminished through the lack of raw material. Unemployment and destitution followed immediately.

The commercial, professional, and middle classes had reserves upon which they could support themselves if there were food supplies to be had. As time went on, the resources of this class were exhausted, and measures for its support were necessary. The agricultural class were in a state of greater economic security than any other class of the community, largely because of European peasant's habit of maintaining himself directly out of the production of his fields.

There were two classes of hard-pressed industrial population: those having no resources whatever and those whose intermittent employment enabled them to help themselves now and then. There was, of course, some surviving activity, especially in Belgium, through small internal commerce, operation of tram lines and municipal services, the partial operation of coal mines, etc. During the planting and harvest seasons there was temporary employment on the farms. Many families also had small fields or garden plots, from which they contributed something to their upkeep; and many of the working population possessed accumulated savings, out of which they were able to support themselves in diminishing measure.

DISTRIBUTING ORGANIZATION

On the distributing side in Belgium there were created, with the admirable benevolent organization already existing as a basis, two classes of agencies, each in close coöperation with a third:

- (a) Communal Charity Committees
- (b) Special Charity Committees
- (c) Support of Public Services and State Institutions.

The communal charity committees were the keystone of the charitable distribution. Although, as has been said, the first consideration in developing the organization was that they should act through established institutions, nevertheless it was necessary to constitute new committees of a nonpartisan character, i.e., made up of equal representation from each of the political parties. The extraordinary emergency made this possible. As with the communal committees governing the distribution of provisions as units of the Provisioning Department, so here separate communal charity committees were created in every commune. The control and direction of these committees was secured by the central organization through subvention and inspection.

In addition to the communal charity committees a large number of special committees devoted to special problems created by war conditions were formed. (Among these were committees caring for refugees, and particularly important were those whose efforts were extended to the care of children.) In some cases these special committees worked in coöperation with the communal committees or with pre-war institutions, and they were controlled by the central organization through subvention and inspection as were the communal committees.

Under the head of support of public services and special institutes was grouped a widely extended series of operations in the nature of loans, which were liquidated after the war but which during the occupation had none the less a benevolent aspect.

DIVISION OF RELIEF MEASURES BETWEEN PUBLIC CHARITY AND GOVERNMENT SUBSIDY

A sharp division was established between the benevolent measures undertaken with public subscriptions and with government assistance. The soup kitchens, free bread tickets, feeding of children, clothing and shelter for the destitute and homeless, were the first applied measures of relief and were established and continued with public gifts. Economic and financial relief were carried out with government subsidies.

Services initiated or maintained by public charity from abroad included the following:

- (a) Breadlines, canteens, etc., administered by communal committees
- (b) Clothing of the destitute—distribution effected by communal committees
- (c) Provision of temporary shelters—administered by communal committees
- (d) Special committees as follows:

Assistance to Children

- “ “ Lace-Workers
- “ “ Refugees
- “ “ Foreigners
- “ “ Artists
- “ “ Doctors and Pharmacists
- “ “ Destitute Young Mothers
- “ “ Belgian Prisoners of War

Assistance to War Cripples
 " " Dispossessed
 " " Antwerp Workrooms
 League for Prevention of Tuberculosis
 Restoration of Churches
 Continual Mercier Clergymen's Fund
 And many others.

The services maintained by government subsidy were:

- (a) Allowance to families whose breadwinners were lost owing to the war
- (b) Supplementary allowances to the destitute
- (c) Advances to families of officers
- (d) Advances to Loan Societies;
- (e) Advances to Communal Governments
- (f) Advances to Savings Banks
- (g) Advances to Building and Loan Societies
- (h) Advances to Bureaux de Bienfaisance
- (i) Advances to Educational Institutions.

GENERAL PROGRAM OF BENEVOLENCE

The general program of benevolence in Belgium, Northern France, and elsewhere was administered through the central committees, i.e., the Commission for Relief in Belgium, Comité National de Secours d'Alimentation, Comité d'Alimentation du Nord de la France, and Comité Général de Ravitaillement des Régions Libérées, all in full coöperation and accord. The financial summaries of the general benevolent program which follow include the expenditures of every character of benevolent resource. It is beyond the scope of this report to describe further the methods of distribution, but it will be well to emphasize a few of the larger items.

The principal benevolent outlay will be seen to relate to provisions supplied to canteens, soup kitchens, and cheap restaurants. One or more of these were established in every commune, and meals were supplied free or at nominal cost directly to the people. Cash advances to individuals and classes, and subsidies to institutions, furnished the means whereby additional numbers were enabled to purchase their requirements from the communal stores for themselves. Another large item of benevolent expenditure relates to clothing. Central and subsidiary factories and workrooms were maintained, huge quantities of secondhand clothing were renovated, new material was manufactured, and from these establishments the finished garments were distributed. Thus by direct gifts of meals or supplementary food, by cash advances, and by gifts of clothing, the relief organization met the general problem of relief.

The financial statements are presented in total for the entire five years of relief work; but an analysis of benevolent expenditure year by year is interesting in that it emphasizes the increasing distress as the war continued. Exclusive of direct expenditures by the Commission in particular benevolence, the total expenditure of the Comité National amounted to \$509,875,123.67 for its work in Belgium. This huge sum was derived from government subsidies and from advances from the Commission, and its disbursement is shown by the following tabulation:

General Benevolent Expenditure of the Comité National, Belgium, 1914 to 1919

		Annual disbursement	Average monthly expenditure during years
1914	2 months.....	\$ 1,169,135.32	\$ 584,567.66
1915	12 ".....	63,262,117.52	5,273,509.79
1916	12 ".....	76,711,990.76	6,392,665.15
1917	12 ".....	100,196,325.20	8,349,693.76
1918	12 ".....	181,572,040.32	15,131,003.36
1919	8 ".....	86,963,514.55	10,857,939.32
Total.....		\$509,875,123.67	

A glance at these figures shows clearly the rising curve of distress to a peak in late 1918 and at the beginning of the reconstruction period after the Armistice. As the years passed the people became more and more dependent upon the soup kitchens and canteens for their food. Out of a total population of 7,289,994 in Belgium, 4,219,561 individuals were registered and received free food in these soup kitchens during 1917-18; and these figures are exclusive of special kitchens for évacuées, both Belgian and French, at which over 400,000 were registered during the same period.

Throughout the entire period it was the Commission's great endeavor, in coöperation with the local committees, to care for the children. The organization for this purpose reached a high degree of excellence and efficiency in Belgium. Supplementary meals were served at all schools, and younger children and nursing and expectant mothers were the particular care of the relief organization. Some indication of the extent of this phase of the relief may be derived from the following figures representing the number of individuals registered and receiving supplementary aid on December 31 of each year in Belgium:

Number of Individuals	Years		
	1916	1917	1918
Children and mothers.....	903,037	1,350,842	1,438,950

All professions were hard hit by the war; those dependent upon luxury, such as artists, journalists, and teachers, peculiarly so. Special committees were set up to assist these classes; but it was extremely difficult to reach all the needy, as many suffered extreme privations before accepting charitable assistance. The Commission established a committee to handle this difficult problem, and its organization was known as the "Assistance Discrète." Advances were made to individuals in the form of confidential loans which were repaid as soon as their income began again.

Charitable funds were distributed in benevolence immediately they became available. From time to time, as has been indicated, the Provisioning Department made advances to the Benevolent Department for additional benevolence. It was some time after actual relief operation terminated and the Commission had withdrawn from Belgium and Northern France that a complete analysis of the accounts brought out the balance of reserves still available for benevolence. As soon as these amounts became known, subsidies were made toward the support of child-health programs already instituted in Northern France, whereas the substantial balance due the people of Belgium was applied to educational purposes. These amounts are included in the following tables, but a more detailed account of the gifts for educational purposes in Belgium is appended:

THE COMMISSION FOR RELIEF IN BELGIUM

NORTHERN RELIEF

I. Benevolent Account of the Commission

As a result of an appeal made in the United States by the Commission, there became available for distribution during the year 1918-19 over 15,000 tons of gift secondhand clothing. The requirements of the people of Belgium and of Northern France were met by the distribution of 10,000 tons throughout Belgium and 4,000 tons throughout Northern France. A quantity of 938 tons of secondhand clothing consisting of 2,130,813 garments and 114,883 pairs of shoes, valued at \$2,067,687.95, was turned over to the American Relief Administration for distribution in Finland and other Baltic states.

GIFTS FOR EDUCATIONAL PURPOSES

After five years of relief operations the Commission withdrew from Belgium in the summer of 1919. An agreement between the Commission and the Belgian Minister of Finance was reached regarding the method of settlement of accounts. The final settlement left unexpended in the hands of the Commission a considerable balance, the bulk of which had accrued during the period of the Armistice. An analysis indicated that this balance was due in part to the surplus on sales to those of the Belgian population who could pay, and in part to operations of the Commission outside of Belgium in liquidation of surplus food and equipment.

No one questioned the fact that the balance remaining after settlement with the Belgian Minister of Finance was the property of the Belgian people, but the method of returning it to the public was undecided. In discussion upon this matter, the Belgian Premier, M. Delacroix, expressed the desire that this money should be applied in some manner beneficent to the public and in commemoration of the relief organizations of the war. A meeting was arranged in August, 1919, at Brussels with the Belgian Cabi-

net, at which were present Messrs. Delacroix, Francqui and others ministers including representatives of all the parties in parliament, and Mr. Hoover. At this meeting the Premier, speaking on behalf of the government requested that Mr. Hoover himself determine the disposition of these balances.

The question had previously been discussed informally at different times with members of the Belgian Government, the Comité National and other representative men in Belgium. Mr. Hoover suggested that no more valuable service could be rendered to the Belgian people than that these funds should be applied to the extension of education in Belgium among all classes of the population, especially among those of limited means. He further suggested that these aims might best be accomplished by

- (a) aiding directly the universities and technical schools of Belgium, and
- (b) initiating such measures as would enable the sons and daughters of those without means to undertake the expenses of such higher training.

These proposals meeting with the approval of the Belgians present, the representatives of the universities were called into conference and it was decided that substantial immediate payments should be made to meet this first need. (a) This money was to be paid over to supplement the capital of the institutions and was apportioned among the universities of Brussels, Louvain, Ghent, and Liège, the School of Mines and Metallurgy at Mons and the Colonial School at Antwerp. To meet the second aim (b) it was agreed that further sums from the liquidation of the relief organizations should be established in the form of a permanent foundation, the income from which should be expended to aid young Belgians to obtain university training and to aid by appropriate means the progress of science in Belgium.

Among the other purposes to which the income of such a foundation (b) might be applied, the question of extension of education in child welfare matters was emphasized. It was thereby expected to perpetuate the educational progress that had already been made in this direction through the relief organizations during the period of occupation.

Pursuant to these understandings, the directors of the Commission for Relief in Belgium (a) authorized the payment of 95,000,000 francs direct to the four Belgian universities and two technical schools named above (these payments were completed in 1920); (b) took the necessary legal action leading to the organization of trusts to manage the endowment funds in Belgium and the United States.

Following an exchange of letters and cables between Mr. Hoover, representing the Commission for Relief in Belgium, and Mr. Francqui, representing the Belgian Ministry and the Comité National, it was decided that the interests of all parties would best be served by dividing the permanent trusts (b) into two coöperating Foundations, one in America and the other in Belgium. This proposal was designed "to build a permanent bridge of fine and high relationship between the two countries, to become a permanent force in both communities." The C. R. B. Educational Foundation, Inc., incorporated in the State of Delaware on January 16, 1920, and the Fondation Universitaire, incorporated by Act of the Belgian Parliament, July 6, 1920, are the resultant organizations.

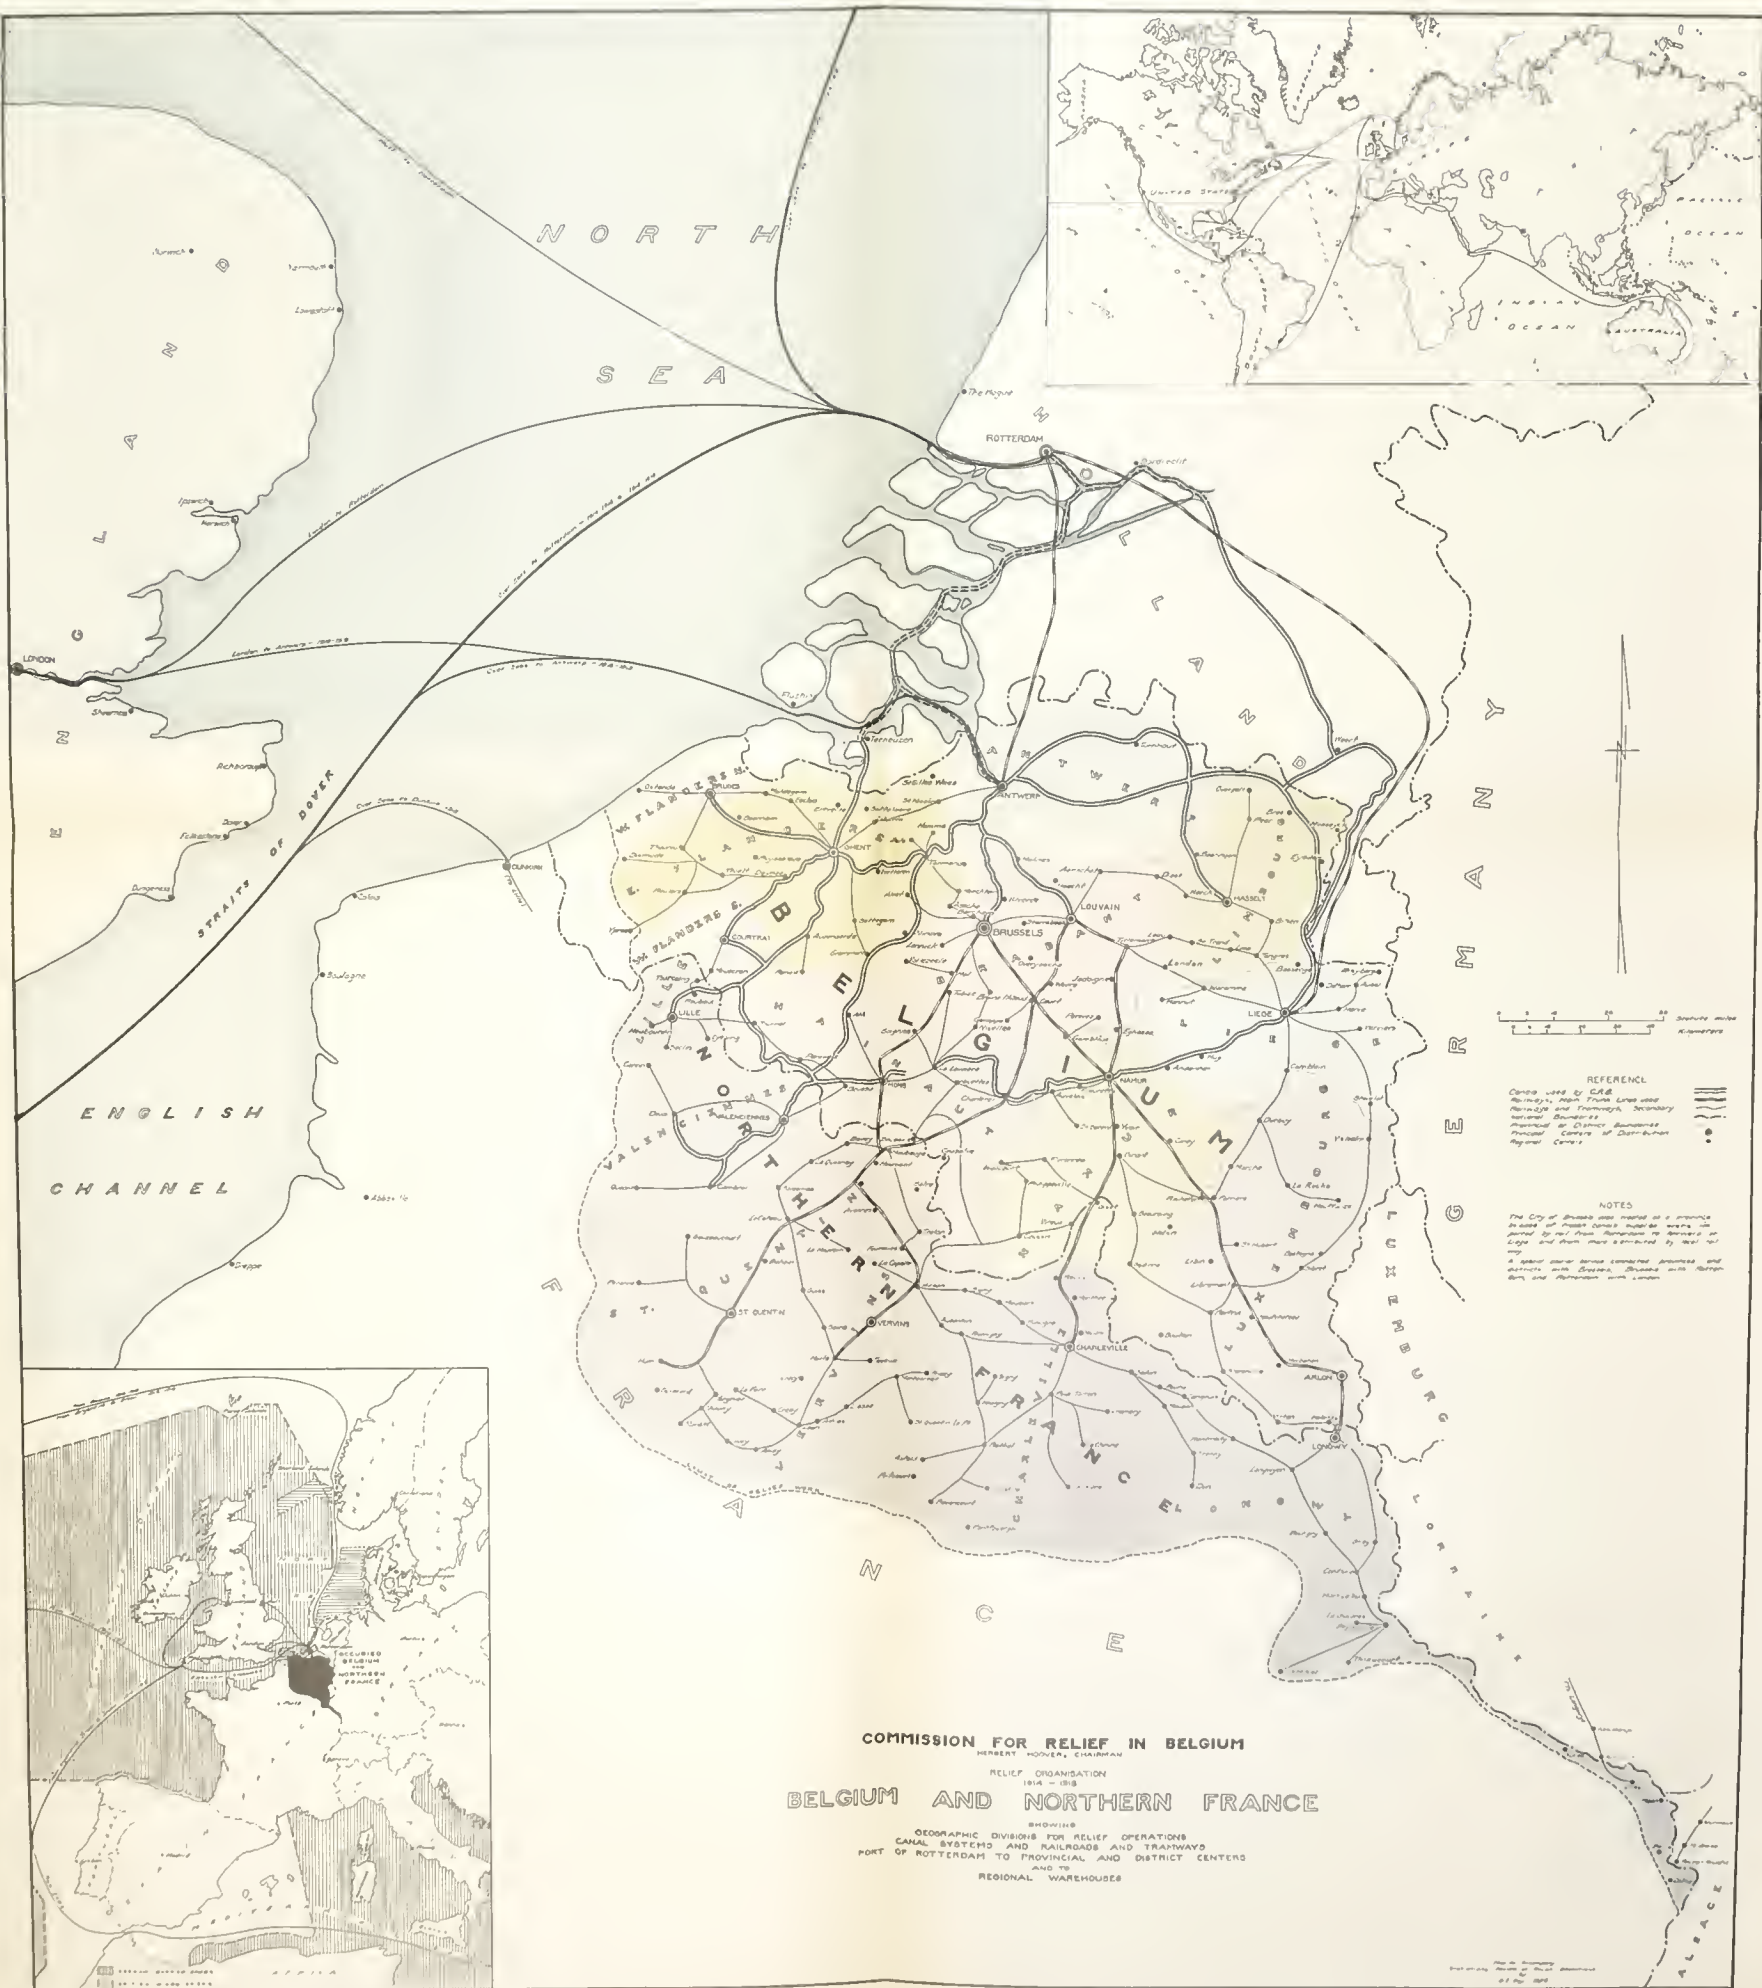

The American Foundation and the Belgian Foundation act in close relationship to promote higher education in Belgium by aiding Belgians of limited means to complete their education, by grants for scientific research and investigation, technical publications, libraries, exchange fellowships and professorships, and by other appropriate means. In other words, the aim of the Foundations is to promote the advance-

ment and diffusion of knowledge and learning among the people of Belgium and between the peoples of Belgium and the United States.

DISTRIBUTION OF BALANCE

The amount of the balance as it appears in the Benevolent Account of the Commission has been shown as \$33,766,039.62. This includes a reserve against claims which might still arise (May, 1924) against the Commission for Relief in Belgium. The manner in which the funds have been applied is shown in the following table:

<i>I. Gifts to Belgian Educational Institutions</i>	
To University of Brussels.....	\$3,818,897.64
To University of Ghent.....	3,818,897.64
To University of Liège	3,818,897.64

THE COMMISSION FOR GENERAL SUMMARY

From Commencement of Operations, November 1, 1914,
General Information

I. THE COMMISSION FOR RELIEF IN BELGIUM.

Formation. Organized October 22, 1914, to feed the 7,500,000 population of Occupied Belgium.

Commencement of Operations. The first shipment of relief supplies into Belgium was made November 1, 1914.

Inclusion of Northern France. Operations were extended April 13, 1915, to include the provisioning of the population of Invaded Northern France, bringing the total population fed to 9,000,000. The first shipment of food supplies into Northern France was made in April, 1915.

Final Shipments. Final shipments of relief supplies into Belgium and Northern France were made in August, 1919.

Period of Operations. The Commission maintained a continuous flow of relief supplies into Belgium and Northern France from November 1, 1914, to August 31, 1919; a period of four years and ten months.

II. RELIEF ORGANIZATION.

A. OUTSIDE BELGIUM AND NORTHERN FRANCE.

Administration.

1. The Commission for Relief in Belgium.
American personnel and supervising staff. Average membership..... 55

Appeal Committees.

1. The Commission for Relief in Belgium.
2. Allied State, City, and Special Committees in the United States, Hawaii, and Philippine Islands. Approximate membership..... 50,000
3. Associated committees in the British Empire, including Canada, Australia, New Zealand, India, South Africa, etc.; in Argentina, in Holland, and elsewhere. Approximate membership 20,500

B. WITHIN BELGIUM AND NORTHERN FRANCE.

Distributing Committees. (Acting for the Commission.)

1. Belgium. The Comité National de Secours et d'Alimentation and its subsidiary Provincial, Regional, and Communal committees. Approximate membership..... 40,000
2. Northern France. The Comité d'Alimentation du Nord de la France and the Comité Général de Ravitaillement des Régions Libérées, together with their subsidiary District, Regional and Communal committees. Approximate membership.. 15,000

Total approximate membership of relief organization.....131,555

V. ADMINISTRATIVE DIVISIONS OF COMMISSION.

Provisioning Department. This division of the organization operated as a business enterprise in the purchase, transportation and sale of supplies for the provisioning of the population.

OPERATING ACCOUNT. PROVISIONING DEPARTMENT

Purchase Value of Provisions	\$942,451,917.81
Transport Expense	165,239,023.32
Total Provisions	\$807,690,941.13
Charges on 20,000,000 rations supplied in Belgium through	
British Army	4,377,650.26
Overhead and Administration. (Entire Organization)	3,908,892.74
Total Charges	\$815,977,484.13
Surplus on Sales, including profits on transactions entirely outside Belgium and France. (Available for Benevolence)	111,704,000.95
Total Operations. Provisioning Department	\$927,681,485.08

Benevolent Department. The function of this department was the care of the destitute.

BENEVOLENT ACCOUNT. BENEVOLENT DEPARTMENT

World Charity	\$52,290,835.51
Comite National de Secours d'Alimentation.	
Profits transferred to Commission for benevolence	23,933,542.26
Provisioning Department.	
Surplus transferred	111,704,000.95
Total Available for Benevolence	\$187,928,378.72

VI. OVERHEAD AND ADMINISTRATION EXPENSE, 0.43%.

The total overhead and administration expense of the entire operation, including a large burden of the cost of administration of allied and associated appeal committees, totaled \$3,908,892.74, or 0.43% of the total cost of operations. On the other hand, a profit of over \$9,600,000 was earned on extraordinary transactions entirely outside of Belgium and France. The overhead expense was paid for out of this profit and the substantial balance became available for benevolence in Belgium and Northern France.

11. Thread, spools	4,628,665
12. Knitting wool, pounds	229,576
13. Accessories: Buttons, Hooks and Eyes, dozens	29,620,202

+ Miscellaneous. Included under the classification of "Miscellaneous" are items of machinery parts, belting, tires and motor spares, oil, lace thread and medical supplies, etc. The supplying of many articles of this nature by the Commission was necessary to maintain flour mills, factories and industries during the German occupation.

The miscellaneous classification also includes 10,619 tons of barracks, hutments, household and hospital supplies secured from the American army and navy and elsewhere directly after the armistice and shipped to Northern France for temporary dwellings and relief of the returning inhabitants of the devastated area.

There is included also an item of 22,649 tons of bunker coal shipped by the Commission to its transshipment ports of Rotterdam and Antwerp for the bunkering of Commission ships. The ordinary coaling ports in England were closed to the Commission ships on account of war conditions for a considerable period, making this operation necessary.

VIII. PROVISIONS PURCHASED BUT DIVERTED FROM RELIEF PURPOSES.

1. Foodstuffs sunk en route	114,000 tons
2. Foodstuffs sold en route	95,096 tons
Total Foodstuffs lost to relief	209,096 tons

RELIEF IN BELGIUM

OF OPERATIONS

to Final Shipments, August 31, 1919, and to Final Liquidation
and Statistical Data (Continued)

IX. MARINE TRANSPORT.

Number of transatlantic loaded voyages.....	993 vessels
Number of cross-channel and other loaded voyages.....	1,320 vessels

THE COMMISSION FOR STATISTICAL STATEMENT

November 1, 1914, to
Funds Available

Funds Available—Excluding Agent and Subsidiary Committees†

	Belgium	France	Total
I. BASIC CAPITAL. Subsidies, Charity and Remittances			
1. Subsidies. Advanced as loans to Belgium and to France. For purchase and transportation of relief goods, and general support of relief organization.			
From United States Government.....	\$259,632,260.44	\$127,000,000.00	\$386,632,260.44
From British Government.....	94,181,410.78	14,863,917.95	109,045,328.73
From French Government.....	94,181,410.78	110,681,113.43	204,862,524.21
Total Subsidies.....	\$447,995,082.00	\$252,545,031.38	\$700,540,113.38
2. World Charity. For support of destitute through benevolence.			
Cash Donations for General Relief			
From United States.....	\$4,919,098.93	\$17,515.92	\$4,936,614.85
From British Empire.....	13,574,748.91	—	13,574,748.91
General.....	83,713.07	—	83,713.07
Total.....	\$19,387,560.91	\$17,515.92	\$19,405,076.83
Gifts in Kind. Provisions and Clothing for General Relief.			
From United States.....	\$19,435,318.26	\$1,965,160.86	\$21,400,479.12
From United States. Clothing distributed by American Relief Administration.....	—	—	2,067,687.95
From British Empire.....	2,081,754.21	—	2,081,754.21
General. Including American and British to Dec., 1915.....	3,246,592.53	—	3,246,592.53
Total Gifts in Kind.....	\$24,767,664.90	\$1,965,160.86	\$26,732,825.76
Total World Charity for General Relief.....	\$44,155,225.81	\$5,012,676.78	\$49,167,902.59
Donations for Special Funds.....	1,088,221.54	17,020.11	1,105,241.65
Total World Charity.....	\$45,243,447.35	\$5,029,696.89	\$50,273,144.24
3. Commercial Exchange. For payment within Belgium in local currency.			
Remittances to Individuals in Belgium.....	\$6,328,328.30	—	\$6,328,328.30
Total Basic Capital.....	\$499,516,860.67	\$257,575,058.57	\$757,091,919.24
II. OPERATING SURPLUS AND PROFITS. See Provisioning Department Statement			
4. Provisioning Department Surplus. For support of destitute and for other purposes through benevolence.			
For benevolence in Belgium.....	\$5,609,423.62	—	\$5,609,423.62
For benevolence in France (Lille).....	—	\$140,622.02	140,622.02
For benevolence in France (General).....	—	15,953,955.31	15,953,955.31
Total Surplus Provisioning Department.....	\$5,609,423.62	\$16,094,577.33	\$21,704,000.95
5. Profits Earned Inside Belgium.			
Profits transferred to Commission by Comité National.....	\$23,933,542.26	—	\$23,933,542.26
Total Operating Surplus and Profits.....	\$19,542,965.88	\$16,094,577.33	\$35,637,543.21
The surplus and profits are the result of a marginal charge made to cover equalization of prices, war destruction, fluctuations in exchange, and to support, through the Benevolent Department, the destitute. They also reflect the voluntary service of members of the Commission and the concessions and special privileges granted to the Relief Commission by individuals and by railways, steamships, telegraph, insurance and brokerage companies all over the world.			
GRAND TOTAL FUNDS AVAILABLE			
For Belgium.....	\$619,059,826.55	—	\$619,059,826.55
For France.....	—	\$273,669,635.90	\$273,669,635.90
Northern Relief. Clothing distributed through American Relief Administration.....	—	—	\$2,067,687.95
Grand Total.....	\$619,059,826.55	\$273,669,635.90	\$892,729,462.45

* The distribution between the British Government and the French Government of these subsidies for Belgium is unofficial and subject to adjustment between the respective governments.

† The above financial statement does not include the operations of agent and subsidiary committees of the Commission, nor does it reflect the huge purchases by the National, Provincial and District Committees of native crops and local supplies. Should these items be included the sum total of the operations would exceed the figure of \$1,300,000,000, and the result would be more nearly representative of the cost of feeding a nation of 2,000,000 people for four and one-half years during a world war.

RELIEF IN BELGIUM

OF FINANCIAL OPERATIONS

August 31, 1919, and to Final Liquidation
and Funds Disbursed

Shipments into Belgium by the Commission for Relief in Belgium began November 1, 1914, and continued without lapse until August 31, 1919. During the German occupation of Belgium complete statistics of distribution in Belgium were carefully maintained and are here presented in summary. Subsequent to the evacuation of the Germans in October and November, 1918, shipments were acknowledged by the restored Belgian Government and no record of final distribution was demanded.

*Note.—The comparatively small discrepancies between "Net Total Shipments Available for Distribution in Belgian Communes" for the "Four Years" and the "Grand Total Distribution in Belgium" for the same period, as shown above, are explained, for the most part by overs and shortages in shipment receipts, gains in weight in milling, losses due to damage and spoilage in transit, and losses in warehouse fires.

*Shipments into Northern France by the Commission for Relief in Belgium began April 1, 1915, and continued without lapse until August 31, 1919. During the German occupation of Northern France complete statistics of distribution in Northern France were maintained and are here presented in summary. Subsequent to the evacuation of the Germans in October and November, 1918, shipments were acknowledged by the restored French Government and no detailed record of final distribution was demanded.

*Note.—The comparatively small discrepancies between "Net Total Shipments Available for Distribution in Communes of Northern France" for the "Four Years" and the "Grand Total Distribution in Northern France" for the same period, as shown above, are explained for the most part by overs and shortages in shipment receipts, gains in weight in milling, losses due to damage and spoilage in transit, and losses in warehouse fires.

Operations of Lille Office of the Commission: As soon as possible after the retreat of the German armies from the North of France the Commission established an office in the city of Lille. The Lille office began operations in the devastated regions on November 1, 1918, and continued until August, 1919. In addition to directing through the local French committees the distribution of relief supplies received through the Commission's ports of Rotterdam, Antwerp, and Dunkirk the Lille office made large direct purchases of supplies, for the most part from units of the American Army and Navy in the neighborhood. These purchases were authorized by the Secretaries of War and the Navy at Washington, and payment was made by the Commission through Washington.

Of the 10,982 tons of supplies so purchased, some 10,619 tons consisted of used army barracks and household equipment. With the valuable assistance of an American Naval Unit, barracks were delivered throughout the devastated areas and for the most part erected and equipped for occupancy. These barracks served as temporary homes for the great numbers of French refugees returning to find their homes but shattered foundations. Through the Lille office, hospitals were assisted, child clinics established, kitchens operated, and the particularly grave problem of housing in part relieved by the erection of barracks in the localities shown above.

THE COMMISSION FOR RELIEF IN BELGIUM

HERBERT HOOVER, Chairman

Relief Cargoes

DETAILS

of

ARRIVALS AT PORTS

FIVE YEARS

November 1, 1914, to August 31, 1919

NOTE

During hostilities the neutral ports of Holland were the only ports of entry for relief cargoes destined for the occupied territories of Belgium and France. The Port of Rotterdam was organized as the main transshipment port from whence relief cargoes were forwarded by lighter and rail to Belgium and Northern France. Immediately after the armistice the Belgian Port of Antwerp and the French Port of Dunkirk became available. The City of Lille also became a subsidiary transshipment point for operations in the North of France.

THE COMMISSION FOR RELIEF IN BELGIUM

HERBERT HOOVER, Chairman

TRANSHIPMENT of Relief Cargoes

DETAILS of PORT OPERATIONS

Monthly Arrivals, Shipments, and Stock Balances

FIVE YEARS
November 1, 1914, to August 31, 1919

NOTE

During hostilities the neutral ports of Holland were the only ports of entry for relief cargoes destined for the occupied territories of Belgium and France. The Port of Rotterdam was organized as the main transshipment port from whence relief cargoes were forwarded by lighter and rail to Belgium and Northern France. Immediately after the armistice the Belgian Port of Antwerp and the French Port of Dunkirk became available. The City of Lille also became a subsidiary transshipment point for operations in the North of France.

INDEX TO PORT OPERATIONS

	Pages	Pages
Port Operations, Five Years, Nov. 1, 1914, to Aug. 31, 1919.....		151-188
Summary of Port Operations. Five years, Nov. 1, 1914, to Aug. 31, 1919.....	152-153	
Monthly Arrivals, Shipments and Stock Balances, Port of Rotterdam, First Year, Nov. 1, 1914, to Oct. 31, 1915.....	154-157

THE COMMISSION FOR RELIEF IN BELGIUM

HERBERT HOOVER, Chairman

STATISTICS of Relief Distribution in BELGIUM

November 1, 1914, to October 31, 1918
COMMENCEMENT TO ARMISTICE

NOTE

Shipments into Belgium by the Commission for Relief in Belgium began November 1, 1914, and continued without lapse until August 31, 1919. During the German occupation of Belgium complete statistics of distribution in Belgium were carefully maintained and are here presented. Subsequent to the evacuation of the Germans in October and November, 1918, shipments were acknowledged by the restored Belgian Government and no detailed record of final distribution was demanded.

Note.—The comparatively small discrepancies between "Net Total Shipments Available for Distribution in Belgian Communes" for the "Four Years" and the "Grand Total Distribution in Belgium" for the same period, as shown above, are explained, for the most part by overs and shortages in shipment receipts, gains in weight in milling, losses due to damage and spoilage in transit, and losses in warehouse fires.

* Shipments into Belgium by the Commission for Relief in Belgium began November 1, 1914, and continued without lapse until August 31, 1919. During the German occupation of Belgium complete statistics of distribution in Belgium were carefully maintained and are here presented in summary. Subsequent to the evacuation of the Germans in October and November, 1918, shipments were acknowledged by the restored Belgian Government and no record of final distribution was demanded.

Note: Statistics of consumption in communes were kept originally in kilograms. In the foregoing transcript the figures throughout have been rounded off to the nearest 100 kilograms. On this account small discrepancies may occur between the printed totals above and an actual summation of the respective columns.

THE COMMISSION FOR RELIEF IN BELGIUM

HERBERT HOOVER, Chairman

STATISTICS

of

Relief Distribution

in

NORTHERN FRANCE

April 1, 1915, to October 31, 1918

COMMENCEMENT TO ARMISTICE

NOTE

Shipments into Northern France by the Commission for Relief in Belgium began April 1, 1915, and continued without lapse until August 31, 1919. During the German occupation of Northern France complete statistics of distribution in Northern France were maintained and are here presented. Subsequent to the evacuation of the Germans in October and November, 1918, shipments were acknowledged by the restored French Government in Northern France, and no detailed record of final distribution was demanded.

Geographical Divisions of Northern France for Relief Operations

*Grand Total Distribution								
"Four Years"—Commencement to Armistice.....	17,232	427,501	57,282	56,189	24,093	72,002	40,565	1,786

*Note.—The comparatively small discrepancies between "Net Total Shipments Available for Distribution in Communes of Northern France" for the "Four Years" and the "Grand Total Distribution in Northern France" for the same period, as shown above, are explained for the most part by overs and shortages in shipment receipts, gains in weight in milling, losses due to damage and spoilage in transit, and losses in warehouse fires.

*Shipments into Northern France by the Commission for Relief in Belgium began April 1, 1915, and continued without lapse until August 31, 1919. During the German occupation of Northern France complete statistics of distribution in Northern France were maintained and are here presented in summary. Subsequent to the evacuation of the Germans in October and November, 1918, shipments were acknowledged by the restored French Government and no detailed record of final distribution was demanded.
